Executive **Summary**

NRL Documents all its initiatives towards sustainable environmental performance for annual reporting. The scope of this reporting is to provide information about the Occupational Health, Safety, Environment and Quality within the sustainable operational performance of National Refinery Limited for the year 2015 for all its stakeholders for strengthening their trust and to promote better relationship. The benchmark and guidelines refer for the development of this report is from ACCA-WWF Environmental Reporting Assessment Criteria, Global reporting initiative guidelines for Sustainable reporting GRI:G3.1

- This report describes the key elements of the updated sustainable approach towards continual improvement and reduction in negative environmental impacts of NRL operational activities and developing the sustainable business strategies.
- We ensure that our manufacturing activities are in line with the government environmental laws and Company's standard operating procedures & safe work practices to support toward environment protection through sustainable development.
- This report gives a brief over view of National Refinery Limited (NRL) operations, manufacturing processes and their associated direct / indirect impact on environment and sustainable initiative introduced.
- We closely monitor hazardous and non hazardous wastes, energy and water consumption for best sustainable practices development.
- NRL sustainable environmental development action plan is focused on optimization of utilities & energy consumption, stack emissions & Effluent water monitoring.
- Response to the Global environmental initiatives, produce environment friendly clean High Speed Diesel De-Sulphurization (HSD) project to meet Euro-II /IV, project is in progress for completion.
- Emergency response plans (ERP) & procedures have been established & implemented, periodic drills are conducted in order to train the manpower and removed weaknesses in the system, accordingly for sustainable development.
- Corrective and preventive actions are taken for continual improvement as per commitment in NRL HSEQ policy statement. The whole mechanism is authenticated by the periodic review by the Management review meeting.
- For sustainable objectives achievement Monitoring & measurements are carried out at specified intervals for the key characteristics of NRL operations that can have a significant environmental impact.
- Periodic evaluation of legal, regulatory and others requirement is carried out for sustainable requirements compliance. Corrective actions are taken in case of any deviation based on root cause analysis. Results are recorded and reviewed for the effectiveness of corrective actions.

- NRL has achieved 23.08 million Safe Man-Hours without Lost Time Injury (LTI) as on December 31, 2015. Continuous efforts to ensure the effective application of sustainable operational controls for minimizing Occupational Health & Safety risks and its environmental impacts.
- On the sustainable environmental measure we have addressed critical environmental concerns such as NOx's / SOx's emissions, green house gases, waste and effluent disposal through friendly manner for continual improvement.
- Sustainable Environmental performance is reviewed at planned intervals to ensure its continuing suitability, adequacy and effectiveness. Opportunities of improvement and need for changes where required are discussed in Management Review, HSE Committees and Steering Committee meetings, Decisions are taken and strategies developed.
- Management un-deterred commitment towards acquiring excellence in overall performance specially for the conversation of environment.
- Implementation of IMS (Integrated Management System) based on ISO 9001:2008, ISO 14001:2004 & OHSAS 18001:2007 standard Audited by M/s. TUV Austria Bureau of Inspection and Certification (Pvt.) Limited -Pakistan during April 2015.
- A well-defined and implemented mechanism to evaluate the Contractors and Suppliers to ensure that their activities & performance in accordance with in sustainable requirement fulfillment.
- NRL is continuously expanding its diversified oil refining business, which ranges from crude oil refining, lube base oil production and some exports. As a market leader in petroleum refining sector, NRL carries out its environmental care activities to become an environment friendly energy enterprise in the country with an approach & guidelines for sustainability.
- In order to make the report more realistic & reliable, statements from the reports of our third party assessors like ISO 14001:2004, OHSAS 18001:2007 and ISO 9001:2008 have been reproduced in the last chapter.
- The report is being assured externally from TUV Austria.

📩 NATIONAL REFINERY LIMITED

Our Environmental Mission and Guiding Environmental Principles

National Refinery limited dedicated to continuous efforts to improve the compatibility of our operations with the environment while economically developing energy recourses and supplying high-quality products and services to consumers.

As a corporate entity we recognize the importance of efficiently meeting society's needs and our responsibility to work with the public, the government, and others to develop and to use natural resources in an environmentally sound manner while protecting the health and safety of our employees and the public.

To meet these responsibilities, NRL pledge to manage our businesses according to these principles.

- To recognize and to respond to community concerns about our raw materials, products, and Operations.
- To operate our plants and facilities and to handle our raw materials and products in a manner that protects the environment and the safety and health of our employees and the public.
- To make safety, health and environment consideration a priority in our planning and our development of new products and process.
- To advice promptly the appropriate officials employees, customers and the public of information on significant industry-related safety, health and environmental hazards, and to recommend protective measures.

- To counsel customers, transporters, and others in the safe use, transportation, and disposal of our raw materials, products and waste materials.
- To economically develop and produce natural resources and to converse those resource by using energy efficiently.
- To extend knowledge by conducting or supporting research on the safely, health, and environmental effects of our raw materials, products processes and waste materials.
- To commit to reduce overall emissions and waste generation.
- To work with others to resolve problems created by handling and disposal of hazardous substances from our operations.
- To participate with government and other creating responsible laws regulations, and standards to safeguard the community, workplace and environment.
- To promote these principles and practices by sharing experiences and offering assistance to others who produce, handle, use, transport, or dispose of similar raw materials, petroleum products and wastes.

Strategies for Today's **Environmental Partnership (STEP):**

One of the most significant long -term trends affecting the future vitality of the petroleum industry is the public's concerns about the environment. Recognizing this trend, NRL have developed a positive, forward looking strategy called STEP.

This program aims to address public concerns by improving industry's environmental, health, and safety performance documenting performance improvements; and communicating them to the public.

The foundation of STEP is the API Environmental Mission and Guiding Environmental Principles.

API standards, by promoting the use of sound engineering and operational practices are an important means of implementing API's STEP program.

SUSTAINABILITY REPORT 2015

NRL Signatory UNGLOBAL Compact

The Ten Principles of UNGlobal Compact's

The UN Global Compact's ten principles in the areas of human rights, labour, the environment and anti-corruption.

Human Rights

- Principle 1: Businesses should support and respect the protection of internationally proclaimed human rights; and
- Principle 2: make sure that they are not complicit in human rights abuses.

Labour

4

- Principle 3: Businesses should uphold the freedom of association and the effective recognition of the right to collective bargaining;
- Principle 4: the elimination of all forms of forced and compulsory labour;
- Principle 5: the effective abolition of child labour; and
- Principle 6: the elimination of discrimination in respect of employment and occupation.

Environment

- Principle 7: Businesses should support a precautionary approach to environmental challenges;
- Principle 8: undertake initiatives to promote greater environmental responsibility; and
- Principle 9: encourage the development and diffusion of environmentally friendly technologies.

Anti-Corruption

• Principle 10: Businesses should work against corruption in all its forms, including extortion and bribery.

🖄 NATIONAL REFINERY LIMITED

Message From Chairman

The preservation of environment is the integral component of our operations. We at NRL focus on a comprehensive policy to address Environment, Safety and Occupational Health issues and ensure its effective implementation through collaborative mechanism.

In order to produce environment friendly and Euro II compliant diesel, NRL has taken initiative for installation of Diesel Hydro Desulphurization project which is expected to be completed by June 2017. We are also focused to meet Country's growing demand of motor gasoline. These steps will eventually enable us to produce Motor Spirit and High Speed Diesel with lesser amount of unfriendly contents that will alleviate the damage to ozone layer. However, the cost being incurred in the project is substantial but NRL is comprehensively directed towards the target of generating healthy environment.

Our understanding towards the responsibility of keeping hazard free environment has been very clear as refinery operations always challenge the integrity of the environment. However, we aim our activities to be strict when it comes for the preservation of the world.

I am confident that our commitment towards our mission, goals and objectives will surely improve the environment around us and will contribute towards global cause.

Dr. Ghaith R. Pharaon Chairman

SUSTAINABILITY REPORT 2015

Message From Deputy Chairman and Chief Executive Officer

6

النَّيْ السَّالَجْ أَال

Global warming is one of today's most serious issues. The continuous emission of carbon dioxide is the leading cause for the surge in greenhouse gases. As a corporate citizen we are fully aware of our responsibilities towards conservation of natural resources and a pollution controlled environment so as to make this planet a better place for our communities.

We are committed towards the compliance of National Environmental Laws & Regulations. We are monitoring gaseous emissions and Liquid effluents through SMART (Self Monitoring and Reporting Tool) program. NRL effluent and stack emissions are not only being continuously monitored but also tested at EPA approved forum and all results are well within targets as mentioned in NEQs (National Environmental Quality Standards).

We are also committed to focus on Occupational Health and Safety and as a result of continuous efforts of NRL team we have successfully achieved 23.08 million Safe Man-Hours without LTI (Loss Time Injury). We are also focussed on the training and development of our employees in order to maintain a sustainable culture ensuring long term benefits.

We reaffirm our commitment to continue with our efforts for a green and clean environment.

Shuaib A. Malik Deputy Chairman & CEO

Vision

Our passion is to attain distinctive leadership amongst the corporate success stories of tomorrow.

We at NRL recognize that realization of this passion needs superior professional competencies, continuous value addition and improvising, development of human capital and complete commitment to safety, occupational health and environment.

Mission

- To remain the premium and preferred supply source for various petroleum products and petrochemicals.
- Offer products that are not only viable in terms of desirability and price but most importantly give value to our customers.
- Deliver strong returns on existing and projected investments of our stakeholders by use of specialised and high quality corporate capabilities.
- Business development by adoption of emerging technologies, growth in professional competence, support to innovation, enrichment of human resource and performance recognition.
- Be a responsible corporate citizen by serving the community through a variety of socio-economic acts and maintaining a high level of safety, occupational health and environmental care.

ICore Values

Following concepts and ideas guide the Management and staff of National Refinery Limited in conducting its business practices in most ethical ways.

1. Ethical Conduct & Integrity

We value lifestyle in our organization where ethics like truth, honesty, integrity and fair play are basic ingredients while interacting within the organization or dealing with the outside world.

2. Teamwork and Responsibility

We share information and resources and step in to help out other team members. Conflicts are worked out in spite of obstacles and difficulties. We accept responsibility with "can do" attitude.

3. Customer Satisfaction

We endeavor to provide quality products to our customers at competitive prices. We value their satisfaction essential for continued growth of our business.

4. Continuous Improvement

We generate new ideas and creative approaches to upgrade and update our refinery to best available technology and processes so that our products are at the level of internationally accepted standards.

5. Profitability

We believe in enhancing our profitability to the maximum so that Employees, Shareholders and Government all benefits from it.

6. Corporate Citizenship

As a good Corporate Citizen, we are more than willing and happy to meet our social responsibilities towards the community around us. We are also committed to meet requirements of health, safety and environment.

🖄 NATIONAL REFINERY LIMITED

Corporate Objectives & Development Strategy

National Refinery Limited is a petroleum refining and petrochemical complex engaged in manufacturing and supplying a wide range of fuel products, lubes, BTX, asphalts and specialty products for domestic consumption and export.

NRL objectives and development strategy are aimed at achieving sustainable productivity and profitability and high standards of safety, occupational health and environmental care. This entails human resource re-engineering & development, enhancing value addition, implementing conservation measures and continuing growth through upgradation of existing as well as addition of new facilities. In the chawnging global environment, corporate objective and development strategy have been defined to meet the challenges of 21st Century.

Corporate Objectives

- Ensure that business policies and targets are in conformity with the national goals.
- Contribute in meeting the country's demand of petroleum and petrochemical products.
- Customer's satisfaction by providing best value and quality products.
- Optimization of the value of barrel of crude oil and cost reduction through conservation measures.
- Achieving and maintaining a high standard of Occupational Health, Safety and Environmental care.
- Ensure reasonable return on the shareholders' existing and projected investments.
- Maintain modern management systems conforming to international standards needed for an efficient organization.

Development Strategy

- Contribute in national efforts towards attaining sustainable self-efficiency in petroleum products.
- Human resource development by upgrading training facilities and exposure to modern technologies/ management techniques.
- Balancing and Modernization for energy conservation and enhanced yield of value added products as well as revamping for environment friendly products.
- Expansion of refining capacity by de-bottlenecking and adding new facilities.
- Acquire newer generation technologies for the efficient refinery operations as well as for attaining highest standards of Occupational Health, Safety and Environmental care.
- Acquiring self-sufficiency in re-engineering, design and fabrication of equipments.

Chairman's Review

It gives me immense pleasure to welcome you all, on behalf of the Board of Directors, at the 52nd Annual General Meeting of your Company and to present annual review of results and audited financial statements for the year ended June 30, 2015.

Global economic growth during the outgoing year has witnessed some improvements in macroeconomic indicators of Pakistan. In addition, the Government has signed agreements with China, including agreements for power generation and Pakistan/ China Economic Corridor, which are encouraging steps towards the future national economic growth. Government has further reduced mark-up rate to 7% to increase investment activity in the country.

As external factors indicate a favourable outlook, your Company's loss after tax in first six months has turned into profit after tax mainly due to better margins in the last two quarters. During the financial year crude oil prices in the international market took a nosedive from US\$ 109 to US\$ 44 and then stayed around US \$60 in the last quarter. Your Company achieved profit after tax of Rs. 3,709 million as compared to Rs. 962 million in the last year.

After improved margins, fuel segment marginally remained in loss after tax of Rs.81 million as compared to loss after tax of Rs.2,835 million in the last year whereas lube segment maintained its profitability by achieving a profit after tax of Rs.3,790 million compared to Rs.3,797 million.

Desulphurization project to reduce environmental hazard and Isomerization project for profitability are in progress. Chinese contractors are actively working while financial closure has been attained from a Syndicate of Banks. Your company is seriously putting all efforts to maintain the pace of the project and complete the same within the contractual period.

Looking at the financial results and ongoing projects, I would like to appreciate the efforts of the management, employees and all other stakeholders for their untiring efforts and anticipate that company will continue receiving support, confidence and trust of all. Your company will continue to strive through better management and improve efficiency to achieve even better results for the times to come.

Dr. Ghaith R. Pharaon Chairman August 12, 2015 Rawalpindi

Refinery Upgradation **Projects**

The Company is in process of upgradation of its plant to comply with the Government directives to produce environment friendly HSD and to meet Country's growing demand of motor gasoline in Phase-I. Phase-II shall be considered for implementation after the completion of Phase-I.

• Diesel Desulphurization and Isomerization

Chinese contractors have started the execution of contract for Diesel desulphurization (DHDS) and Isomerization (ISOM) projects. The company estimates that contract value plus other cost of the project would be US\$ 349 million. Initial mobilization advance has been paid by the company to the contractors for supply of plant and machinery and for construction and installation of the plant. The company has entered into syndicate agreement with consortium of banks for financing of these projects for an amount of Rs.24.2 billion at 1.7% above six months KIBOR. The loan is to be repaid in 10 years semi-annual payments with grace period of two years. Government directed to complete the project by 31 December 2015, however, due to various impediments the project would be completed by the mid of 2017, accordingly, your company has applied to government for the extension.

The Government has agreed to increase the deemed duty on HSD by 1.5% on completion of these projects, which will increase refinery margins. The improved margins due to conversion of Naphtha into Motor gasoline will also contribute favourably to improve company's margins.

Other Upgradation Projects

These projects are planned in Phase-II of refinery upgradation projects and award of job to EPC Contractor shall be considered after finalization of Desulphurization and Isomerization projects.

Two Stage Unit at Lube–I Refinery

The project has been planned to enhance the installed crude oil processing capacity from 12,050 Barrel per stream day (bpsd) to 17,000 bpsd and vacuum fractionation capacity from 5,200 bpsd to 6,600 bpsd. Design package and ITB documents for bidding are complete.

101 Crude Distillation Unit at Fuel Refinery

The project has been envisioned, to enhance the installed crude oil processing capacity from 50,000 bpsd to 53,000 bpsd at crude distillation unit of fuel refinery. Design package and ITB documents for bidding are complete and the project is expected to be awarded during the year 2015-16.

• Nitrogen Gas Generator

For the purpose of financial economization it is planned to use nitrogen gas as inert media for MEK units and for tank blanketing. Nitrogen gas generator with technology of Pressure Swing Absorption is being planned having capacity of 400 normal cubic meter/ hour. The contract for installation is likely to be awarded during the year 2015-16.

Reverse Osmosis Plant

Considering the scarcity of water and its requirement for refinery operations, Company has planned another 250,000 gallons per day Reverse Osmosis plant on which work is in progress.

• Up gradation of SAP ERP System from Version 4.6c to SAP ECC6

The Company has successfully completed the upgradation of its ERP system from 4.6c to ECC-6 including additions of certain modules. The new version and modules of SAP has enhanced tool for streamlining the work and for improved management and financial reporting.

Corporate Social Responsibility

The Company realizes its social responsibility towards the national economy apart from its customers, employees and shareholders. As a responsible corporate citizen, the Company has contributed to different social segments of the economy in various ways for improving quality of life in the country. Recently, Company contributed Rs.100,000 as a donation to Child Association to help deprived children.

During the year company has paid Rs.200,000 to Ziauddin University for advertisement / purchase of souvenirs for students. The company is making such

contribution for the betterment of institutions providing education to young generation.

Company is ambitious to be recognized as social partner and not only as commercial entity. In this respect, the Company has kept five disabled persons on its manpower strength as prescribed in Employment and Rehabilitation Ordinance, 1981 and also made payments to National Council for the Rehabilitation of Disabled Persons in lieu of less number of such persons in the Company's employment.

Employees & Management Relations

The cordial relationship between the management and union persisted unabatedly. The productivity achieved reflects the concerted and sincere collective endeavours. The Company lays emphasis on enhancing the sports activities and has provided the required facilities to achieve this objective which may go a long way in maintaining good health of the employees, boosting up their morale and sense of belonging. The major events held during the year are Inter-Department Cricket Tournament, participation of NRL Cricket team in PARCO Cricket Tournament.

Contribution to National Exchequer

During the financial year, the Company contributed Rs. 40,231 million to the National exchequer in the shape of direct and indirect taxes and earned valuable foreign exchange of US\$ 157 million through the export of Naphtha and Lube Base Oils.

In addition to the above, the Company has paid to government Rs. 4,656 million as discount and windfall levy on account of local crude oil and condensates purchased from oil and gas exploration companies.

Human Resource **Development**

Human Resource of the Company is playing a very significant role in achieving the short and long-term corporate and strategic objectives of the Company. Therefore, your Company focuses special attention on their training and development. Various staff members were nominated for local courses and workshops in different technical and non-technical disciplines. In addition to hands on executive training programs, the

Company has also conducted apprenticeship program where theoretical and practical training in Refinery operations and maintenance was imparted which will not only meet the additional requirement of trained manpower for expansion projects of the Company but would extend a great help to the Petroleum Refining industry in the availability of trained manpower.

SUSTAINABILITY REPORT 2015

Code of Conduct

National Refinery Limited (the Company) is engaged in the manufacturing of wide range of petroleum products with the objective to achieve sustainable productivity, profitability and high standards of safety, occupational health and environmental care. This entails human resource development, enhancing value addition, implementing conservation measures and growth by up-gradation and addition of newer generation technologies.

The Company requires all its Board Members and Employees to act within the authority conferred upon them and in the best interests of the Company and observe all the Company's policies and procedures as well as relevant laws and regulations, as are applicable in individual capacity or otherwise, including but not limited to the corporate values, business principles and the acceptable and unacceptable behaviour (hereinafter called the Company's Code of Conduct) embodied in this document.

The Company believes that the credibility, goodwill and repute earned over the years can be maintained through continued conviction in our corporate values of honesty, justice, integrity and respect for people. The Company strongly promotes trust, openness, teamwork and professionalism in its entire business activities.

- The business principles are derived from the above stated corporate values and are applied to all facets of business through well-established procedures. These procedures define behavior expected from each employee in the discharge of his/her responsibility.
- NRL recognizes following obligations, which need to be discharged with best efforts, commitment and efficiency:
 - Safeguarding of shareholders' interest and a suitable return on equity.
 - Service customers by providing products, which offer value in terms of price, quality, safety and environmental impact.
 - Respect human rights, provide congenial working environment, offer competitive terms of employment, develop human resource and be an equal opportunity employer.
 - Seek mutually beneficial business relationship with contractors, suppliers and investment partners.

- The Company believes that profit is essential for business survival. It is a measure of efficiency and the value that the customer places on products and services produced by the Company.
- The Company requires honesty and fairness in all aspect of its business and in its relationships with all those with whom it does business. The direct or indirect offer, payment, soliciting and accepting of bribe in any form is undesirable.
- The Company is fully committed to reliability and accuracy of financial statements and transparency of transactions in accordance with established procedures and practices.
- The Company does not support any political party or contributes funds to groups having political interests. The Company will however, promote its legitimate business interests through trade associations.
- The Company, consistent with its commitments to sustainable developments, has a systematic approach to the management of health, safety and environment.
- The Company is committed to observe laws of Pakistan and is fully aware of its social responsibility. It would assist the community in activities such as education, sports, environment preservation, training programs, skills development and employment within the parameters of its commercial objectives.
- The Company supports free market system. It seeks to compete fairly and ethically within the framework of applicable competition laws in the country. The Company will not stop others from competing freely with it.
- In view of the critical importance of its business and impact on national economy, the Company provides all relevant information about its activities to legitimate interested parties, subject to any overriding constraints of confidentiality and cost.
- The Company requires all its board members and employees to essentially avoid conflict of interest between private financial and/or other activities and their professional role in the conduct of Company business.

🏝 NATIONAL REFINERY LIMITED

- No board member or employee shall in any manner disclose to any person or cause disclosure of any information or documents, official or otherwise, relating to the Company, except those published, and unless he/she is authorised by the management.
- All papers, books, drawings, sketches, photographs, documents and similar papers containing analysis, formulas, notes or information relating to the Company's business affairs or operations shall always be treated as the Company property, whether prepared by the employee or otherwise and no employee shall be permitted to carry any of these outside business premises unless specifically authorised to do so by the management.
- The Company's property, funds, facilities and services must be used only for authorised purposes.
- The board members or employees of the Company specifically those coming in direct contact with the vendors doing or seeking to do business with the Company shall not receive favours or incur obligations. In case any contractor/supplier to have business relations with the Company happen to be a relative of an official who is entrusted the responsibility of opening/evaluation/award of supply/contract job or with execution or certification of material/services, he/ she shall immediately bring the fact to the notice of Managing Director who may entrust the responsibility to another.
- Each employee shall devote his/her full time and energy exclusively to the business and interests of the Company. In particular, no employee (including those on leave) unless otherwise permitted by the Company, shall directly or indirectly engage in any other profession or business or enter the services of or be employed in any capacity for any purpose whatsoever and for any part of his/her time by any other person, government department, firm or company and/or shall not have any private financial dealings with any other persons of firms having business relations with the company for sale or purchase of any materials or equipments or supply of labour or for any other purpose. Every employee shall hold himself in readiness to perform any duties required of him by his/her superiors to the best of his/her ability.
- No board member or employee of the Company shall, directly or indirectly, deal in the shares of the Company

in any manner during the closed period, as determined and informed by the Company.

 No board member or employee of the Company shall practice insider trading.

Without prejudice to any penal action defined in any statute, as applicable, against any kind of non-compliances/ violations, non-compliance with the Company's Code of Conduct may expose the person involved to disciplinary action as per Company's rules and/or as determined by the management or the Board of Directors of the Company, as the case may be, on case to case basis.

On behalf of the Board

SHUAIB A. MALIK Deputy Chairman & Chief Executive Officer June 18, 2012

Statement of Compliance with **The Code of Corporate Governance**

This statement is being presented to comply with the Code of Corporate Governance (the Code) contained in listing regulations of Stock Exchanges where the shares of the Company are listed, for the purpose of establishing a framework of good governance, whereby a listed Company is managed in compliance with the best practices of corporate governance.

The Company has applied the principles contained in the Code in the following manner:

1. The Company encourages representation of independent non-executive directors and directors representing minority interests on its Board of Directors. At present the Board includes:

Category	Names
Independent Directors	Mr. Tariq Iqbal Khan Mr. Musa Bojang Mr. Bahauddin Khan
Executive Directors	Mr. Shuaib A. Malik Mr. Jamil A. Khan Alternate to Mr. Laith G. Pharaon, Director
Non-Executive Directors	Dr. Ghaith R. Pharaon Alternate Director: Mr. Abdus Sattar Mr. Laith G. Pharaon Mr. Wael G. Pharaon Alternate Director: Mr. Babar Bashir Nawaz

The independent directors meet the criteria of independence under clause (i)(b) of the Code.

- 2. The Directors have confirmed that none of them is serving as a director in more than seven listed companies, including this Company.
- 3. All the resident directors of the Company are registered as taxpayers and none of them has defaulted in payment of any loan to a banking company, a DFI or an NBFI or, being a member of a stock exchange, has been declared as defaulter by that stock exchange.

20

- 4. No casual vacancy occurred in the Board of directors during the year ended June 30, 2015.
- 5. The Company has prepared a 'Code of Conduct' and has ensured that appropriate steps have been taken to disseminate it throughout the Company along with its supporting policies and procedures.
- 6. The Board has developed vision and mission statements, overall corporate strategy and significant policies of the Company. A complete record of particulars of significant policies along with the dates on which they were approved or amended has been maintained.
- 7. All the powers of the Board have been duly exercised and decisions on material transactions, including appointment and determination of remuneration and terms and conditions of employment of the CEO, other executive and non-executive directors, have been taken by the board.
- 8. The meetings of the Board were presided over by the Chairman or Deputy Chairman, and the Chief Financial Officer and Company Secretary attended all the meetings. The Board meets at least once in every quarter. Written notices of the Board meetings along with agenda and working papers were circulated at least seven days before the meetings. The minutes of the meetings were appropriately recorded, circulated and signed by the Chairman of the meeting of the Board of Directors.
- 9. The Directors were apprised of their duties and responsibilities from time to time.
- 10. The Board has approved terms of appointment and remunerations of Chief Financial Officer (CFO), Company Secretary and Head of Internal Audit.
- 11. The director's report for this year has been prepared in compliance with the requirements of the code and fully describes the salient matters required to be disclosed.
- 12. The CEO and CFO duly endorsed the financial statements of the Company before approval of the Board.

📩 NATIONAL REFINERY LIMITED

- 13. The directors, CEO and executives do not hold any interest in the shares of the Company other than that disclosed in the pattern of shareholding.
- 14. The Company has complied with all the corporate and financial reporting requirements of the Code.
- 15. The Board has formed an Audit Committee. It comprises of four members, of whom two are non-executive directors, one is independent director and the Chairman of the committee is also an independent director.
- 16. The meetings of the audit committee were held at least once every quarter prior to approval of interim and final results of the Company and as required by the Code. The terms of reference of the committee have been formed and advised to the committee for compliance.
- 17. The Board has formed an HR and Remuneration Committee. It comprises of four members, of whom one is non-executive director, one is independent director and the Chairman of the Committee is also an independent director.
- 18. The Board has set-up an effective internal audit function and that is involved in the Internal Audit on full time basis relating to the business and other affairs of the Company.
- 19. The statutory auditors of the Company have confirmed that they have been given a satisfactory rating under the quality control review program of the Institute of Chartered Accountants of Pakistan, that they or any of the partners of the firm, their spouses and minor children do not hold shares of the Company and that the firm and all its partners are in compliance with International Federation of Accountants (IFAC) guidelines on code of ethics as adopted by the Institute of Chartered Accountants of Pakistan.
- 20. The statutory auditors or the persons associated with them have not been appointed to provide other services except in accordance with the listing regulations and the auditors have confirmed that they have observed IFAC guidelines in this regard.
- 21. The related party transactions have been placed before the audit committee and approved by the

Board of Directors along with pricing methods for transactions carried out on terms equivalent to those that prevail in the arm's length transactions.

- 22. The 'closed period', prior to the announcement of interim/final results, and business decisions, which may materially affect the market price of Company's securities, was determined and intimated to directors, employees and stock exchanges.
- 23. Material/price sensitive information has been disseminated among all market participants at once through stock exchanges.

We confirm that all other material principles contained in the Code have been complied with.

On behalf of the Board

SHUAIB A. MALIK Deputy Chairman & Chief Executive Officer

AUDITORS' REPORT TO THE MEMBERS

We have audited the annexed balance sheet of National Refinery Limited as at 30 June 2015 and the related profit and loss account, statement of comprehensive income, cash flow statement and statement of changes in equity together with the notes forming part thereof, for the year then ended and we state that we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purposes of our audit.

It is the responsibility of the Company's management to establish and maintain a system of internal control, and prepare and present the above said statements in conformity with the approved accounting standards and the requirements of the Companies Ordinance, 1984. Our responsibility is to express an opinion on these statements based on our audit.

We conducted our audit in accordance with the auditing standards as applicable in Pakistan. These standards require that we plan and perform the audit to obtain reasonable assurance about whether the above said statements are free of any material misstatement. An audit includes examining on a test basis, evidence supporting the amounts and disclosures in the above said statements. An audit also includes assessing the accounting policies and significant estimates made by management, as well as, evaluating the overall presentation of the above said statements. We believe that our audit provides a reasonable basis for our opinion and, after due verification, we report that:

- in our opinion, proper books of accounts have been kept by the Company as required by the Companies Ordinance, 1984;
- (b) in our opinion:
 - the balance sheet and profit and loss account together with the notes thereon have been drawn up in conformity with the Companies Ordinance, 1984, and are in agreement with the books of accounts and are further in accordance with accounting policies consistently applied;
 - the expenditure incurred during the year was for the purpose of the Company's business; and
 - the business conducted, investments made and the expenditure incurred during the year were in accordance with the objects of the Company;
- (c) in our opinion and to the best of our information and according to the explanations given to us, the balance sheet, profit and loss account, statement of comprehensive income, cash flow statement and statement of changes in equity together with the notes forming part thereof conform with approved accounting standards as applicable in Pakistan, and, give the information required by the Companies Ordinance, 1984, in the manner so required and respectively give a true and fair view of the state of the Company's affairs as at 30 June 2015 and of the profit, total comprehensive income, its cash flows and changes in equity for the year then ended; and
- (d) in our opinion no Zakat was deductible at source under the Zakat and Ushr Ordinance, 1980 (XVIII of 1980).

IMS (HSEQ) Policy

National Refinery Limited is committed to the **Occupational Health & Safety** of its employees, protection & continual improvement of the **Environment** and to produce **Quality** products to the satisfaction of customers.

It staunchly believes in the application of this commitment to its customers, contractors, suppliers and the community in which it operates to produce value added products. This guiding principle shall be used to demonstrate through the following:

- Carry out business in a manner to prevent injury/ ill health of entire workplace and community.
- Work on the principle that all incidents can be prevented. Therefore, vigorously promote a high standard of safety consciousness and permit to work system.
- Provide a safe working environment through effective leadership by supporting safety, fire protection & security programs and by protecting assets of the company.
- Develop contingency and emergency preparedness plans to minimize harm from anyincident.
- Comply with applicable laws and regulations. Interact with government, industry and community on environmental issues.

- Prevent pollution by establishing programs to conserve energy, continually improve production processes, minimize wastes, harmful releases into the air, land and sea.
- Continual Improvement in Health, Safety, Environment & Quality Management and its performance by acquiring superior professional competencies, value addition & improvement in development of Human Capital.
- Periodically evaluate performance against established objectives.
- Provide training and create awareness to ensure that all employees, contractors and all stakeholders are fully informed about HSEQ policy.

Chief Executive Officer

NRL-POL-001

Rev-03 / April 2008

SUSTAINABILITY REPORT 2015

Description of Facilities Location & Layout

NRL is located in an industrial zone (at 24°50'46"N, 67°07'32"E), in the Korangi district, to the east of Karachi, Sindh Province, Pakistan. Its Storage and distribution Terminal is located at Keamari, the port district in the south of Karachi (at 24°48'58" North, 66°58'52" East) about 18km away from the Refinery, and is linked to the Refinery via 4 pipelines. Karachi is the largest city in Pakistan (population approximately 21.2 million) located on the Arabian Sea in the south of Pakistan.

National Refinery Limited:

NRL, is the largest petroleum-refining complex of Pakistan and comprises of three refineries & a BTX plant located in the industrial zone of Korangi in Karachi Metropolitan Area, 15 KM South East of the center of Karachi. The company was incorporated on August 19, 1963 as a public limited company. NRL was nationalized under economic reform order in January 1972 and its corporate matters were entrusted to State Petroleum Refining and Petrochemical Corporation Pvt. Limited (PERAC) under the Ministry of Production. In 1998 the corporate control of NRL was transferred to the Ministry of Petroleum & Natural Resources and in June 2005, NRL was privatized through Privatization Commission of Pakistan and Management control was transferred to Attock Oil Group of Companies through sale of 51% equity stake of the company.

History:

The first Lube Refinery was constructed by SNAM Progetti of Italy in May 1964 having a capacity to process 0.6 Millions Tons of crude oil per year. The refinery commenced its production in 1966 having design capacity 76,200 tons of lube base oil and 110,000 tons asphalt per year.

In 1974, a turnkey agreement was signed between National Refinery Ltd and Industrial Export Import (IEI)

of Romania, to design and construct the Fuel Refinery with 1.5 million tons per year of crude oil refining capacity. The Fuel Refinery was commissioned in April 1977.

Its processing capacity was further increased to 2.2 million tons per year of crude oil in the year 1990.

In January 1974, NRL entered into an agreement with Nordon et Cie of France for the design and erection of an Aromatics Extraction Unit for the production of Benzene, Toluene and Xylene (BTX). It was the country's first petrochemicals unit integrated with the unit of the Fuel Refinery. The Project was completed and commissioned in April 1979 in order to meet the country's requirements of feedstock for Aromatic solvents and explosives production.

The setting up of BTX plant downstream of the Fuel Refinery has been a valuable product portfolio expansion measure as it provides pure petrochemicals i.e. Benzene, Toluene and Xylene for the specialty chemicals market. Toluene was made available for usage at NRL's own Lube Dewaxing Units, and also the requirements of Toluene for Defence purposes are fulfilled by NRL.

Over the years, the demand for Lube Base Oils (LBO) increased and a need was felt to enhance production of LBO, the value added product from the Furnace Oil, which was exported till 1986. A second Lube Refinery was therefore planned, for which basic engineering and design was carried out by C.E. Lummus of U.K. A turnkey agreement was signed between IEI of Romania and NRL in 1981 to construct a second Lube Refinery to produce 100,000 tons of Lube Base Oils and 100,000 tons of Asphalts. The second Lube Refinery was commissioned in January 1985.

At present NRL is the sole producer of Lube Base Oils, with a combined achieved production capacity of 190,000 tons/year of its two Lube Refineries. Besides, it produces 225,000 tons/year of road Bitumen from its Lube Refineries.

🖄 NATIONAL REFINERY LIMITED

NRL has grown and developed with the country and today possesses a key position in oil refining sector of the country. The refinery complex of NRL consists of four production entities:

1.	Lube -I Refinery	Crude Oil Processing 600,000 Tons Per Annum (TPA), Lube Base Oil 76,200 TPA (Designed)
2.	Fuel Refinery	Crude Oil Processing 2.2 Million TPA
З.	BTX Plant	BTX production 25,000 TPA
4.	Lube -II Refinery	Lube Base Oil 100,000 TPA

Recent Development / Future Projects:

Diesel Desulphurization:

NRL has taken initiatives towards production and marketing of environment friendly fuels in Pakistan. A study has already been completed to put up a Diesel Desulphurization unit to produce Ultra Low Sulphur Diesel (ULSD). Existing, Kerosene Hydro treating unit out of service will be utilized for this along with new auxiliary units. Preliminary study indicated that unit could be revamped to Diesel Desulphurization unit of capacity 12,000 Barrel Per Day for ULSD production. Contract for engineering design specifications was awarded to M/s UOP and has been completed.

Raw Material:

Crude oil is the raw material for any refinery. The crude oil processed at NRL includes Arabian Light, Iranian light and local crude. The approximate ratio of imported Crude and Local Crude is 85% and 15% respectively. The crude oil is stored in tanks.

Crude oil is a mixture of different hydrocarbons in liquid form, which is lighter than water. Crude oil of different origins has different compositions and quality. It also contains very small quantities of other elements like Sulphur, Nitrogen and some metals. Some quantity of water and salts are also present in the crude oil.

Chemicals Used:

Various types of chemicals are used in refining processes. Besides refining processes, various types of chemicals are also used in water treatment as well as in finished products. Some of the chemicals used in refining processes or as additives in finished products, with their specific functions are shown in Table I & II respectively.

Chemical Name / Brand Name	Function
Caustic Soda	For neutralization & removal of Sulphur compounds.
Ammonia	For pH control.
PERC (Perchloroethylene)	Uses at plat-forming unit and enhances the acid side reaction.
Sulpholane	At BTX unit Sulpholane is used in the extraction section.
Clay	In the fractionation section of BTX unit, clay is used to removed olefins.
Propane	Used in De-asphalting process. It acts as a solvent & separates the asphalt
	from the oil.
Furfural	To remove the non-paraffinic hydrocarbons from lube oil distillate at Furfural
	Extraction Unit.
Platinum catalyst	Plat-forming catalyst.
Cobalt Molybdenum Catalyst	Hydro treatment catalyst.
Methyl Ethyl Ketone	Used for de-waxing of lube oil.
De-emulsifiers	To break oil water emulsion in desalters.
Corrosion inhibitor	To combat overhead corrosion.
Hydrazine's	Anti oxidants in Boilers.
Anti scaling	To control scale formation
Hydrochloric Acid	Water Treatment Plant

Table – I Chemical Used in Various Processes

Table – IIChemical Used as Additive in Finished Products

Chemical Name / Brand Name	Function
Pour point depressant	To reduce the pour point.
Antioxidants	Used for aviation fuel.

Production Process (Fuel Refinery):

Crude oil is processed at fuel refineries to produce products like LPG, Motor Spirit, Kerosene, Aviation Fuels, High Speed Diesel and Furnace oil. The atmospheric bottom is used as feedstock for producing lube base oil at Lube Refinery. Different processes carried out at refinery are discussed below:

Desalting:

The purpose of desalting is to remove brine, solids and other insoluble impurities from crude oil. To accomplish this, crude is first preheated in heat exchangers in order to have the required viscosity normally in the range of 5-15 centistokes. Salts and sediments are removed in desalter by washing the crude oil with water (typically 2-4% of the total crude feed). These are settled with wash water and tend to form emulsions. The wash water is separated by electrostatic precipitation using de-emulsifiers.

The salts thus removed are mainly chlorides and Carbonates of Magnesium, Sodium and Calcium. They

cause corrosion downstream in the heat exchangers, furnaces and distillation units if not removed. The desalting process is an important upstream step to reduce the maintenance cost of the downstream equipments.

Distillation Process:

The desalted crude oil after preheating by heat exchangers and furnaces is fractionated in distillation tower. The distilled fractions of crude oil mainly consist of residue, gas oil and overhead (mixture of gases, light Naphtha, Heavy Naphtha, Kerosene and steam/condensate) products. The gas oil and kerosene are drawn off from side strippers where lighter ends are removed to maintain the flash point.

Naphtha Stabilizer and splitter:

Naphtha stabilizer is provided to remove light ends from full range naphtha. LPG separated during process is sent to storage. Stabilized naphtha is then charged to naphtha splitter where it is splitted into light naphtha and heavy naphtha fractions. Major part of heavy naphtha is upgraded at hydrobon and plat-forming units. Light naphtha is used for gasoline blending.

Merox Sweetening Units:

LPG, Light Naphtha, Heavy Naphtha and Kerosene are treated at Merox sweetening units in the presence of catalyst and thus Sulphur compounds are removed to make these products suitable for marketing.

Hydro-Treating Unit:

In the Hydro unit, Heavy Naphtha is treated with hydrogen rich gas stream at high pressure and elevated temperature in the presence of catalyst (Cobalt Molybdenum). The Sulphur present in Heavy Naphtha is converted to H2S, Nitrogen to ammonia (NH3), Halide to HCl and oxygen to H2O. In this process hydro treated Naphtha is produced which is feed stock for Plat-Forming Unit.

Plat-Forming Unit:

Plat-forming is a catalytic reforming process to up-grade the Octane Number of the low octane hydro-treated Naphtha to produce High Octane Blending Component (HOBC) for the production of motor gasoline or the feed stock for BTX Extraction Unit.

The treated Naphtha is the feed of plat-forming unit, which consists of a Bi-metallic catalyst (Platinum Rhenium and Aluminum oxide as a carrier). Basically, the plat-forming process is the re-arrangement of the molecules of Naphtha feed by changing the molecular structure of the hydrocarbons. The by-products of platforming unit are LPG, hydrogen rich gas (part of which is recycled in the plat-forming process and remaining is used as a refinery fuel). LPG after sweetening goes to storage.

Propane Recovery Unit:

Liquefied Petroleum Gas (LPG) from plat-forming unit is further fractionated for production of high purity refrigeration grade propane. Propane is used In-house as solvent at Propane De-asphalting unit (PDA) and for refrigeration purpose at MEK units.

BTX Plant:

Based on Reformate as feedstock from the Fuel Refinery. The unit is designed to extract the aromatic by SHELL Sulfolane extraction process. This aromatic mixture is fractionated through multi stage distillation for the production of high purity Benzene, Toluene, and Xylene. The BTX unit has two sections:

- Extraction section
- Fractionation section.

In the Extraction Section Aromatics are extracted from the Reformat using the solvent "Sulfolane". Non-aromatics are pumped to storage after washing with water. They are used to blend in motor gasoline.

SUSTAINABILITY REPORT 2015

In the Fractionation Section Aromatic extract is clay-treated, to remove Olefins. Thereafter Benzene, Toluene, and Xylene are separated in fractionating columns.

Production Process (Lube Refinery):

NRL's two Lube Refineries were installed with a time gap of nearly 19 years with each other. The starting point of first Lube Refinery is a Crude Distillation Unit (CDU) and subsequent Vacuum Distillation Unit (VDU), whereas the Second Lube Refinery directly starts with a Vacuum Distillation as it takes feedstock from Fuel Refinery's Crude Distillation Unit (CDU). Whereas the downstream process units are same in basic technology, The second Lube Refinery designed in eighties has more sophisticated, advanced and energy efficient plants.

Atmospheric and Vacuum Distillation Process:

The Reduced Crude oil is usually heated to 395°C and fed to the Vacuum Distillation Tower, which is kept under high vacuum (26-27 inches of Hg). The gases from the top of the vacuum Tower are sucked by means of steam ejectors and condensed along with steam. The oil and water are then separated.

The lubricating oil distillates obtained by vacuum distillation process are about 47% of the feedstock and the remaining 53% is called Vacuum Residue, which is

a valuable material as it still contains about 38% lube oil in it, which cannot be taken out by the above distillation process. It is therefore processed at the Propane Deasphalting Unit (PDA).

Propane De-Asphalting Process (PDA):

In this process the Vacuum Residue product i.e the heaviest residual portion of the vacuum distillation, is treated with propane for the production of heavy lubricating oils and asphalts. The process is carried out at a high-pressure approximately 480-525 psig and at a controlled temperature of 55°C to 70°C. Liquid propane acts as a solvent and dissolves higher fractions of oil and rejects the heavier asphalted material from the charge oil. The oil thus extracted from the feedstock is called deasphalted oil and the material recovered from the bottom of the tower is termed as Asphalt. Propane is recovered from oil using Flash Towers, Stripping Towers.

Furfural Extraction Process:

In this process low viscosity index (LVI) non-paraffinic hydrocarbons of lube oil distillate are extracted from the lubricating oil distillates obtained from vacuum distillation unit & PDA units. In extraction process the charge oil is brought in contact with solvent (Furfural) counter-currently in a Rotating Disc Contractor (RDC) Tower. The RDC tower is operated and is full of oil and solvent. As the Furfural is heavier than oil, it travels to

🖄 NATIONAL REFINERY LIMITED

the bottom of the tower along with the extracted nonparaffins, which remain dissolved in it.

Finally the solvent and non-paraffin mix is drawn from the bottom of the RDC tower. The solvent has to be separated from the non-paraffin mix so that it can be reused. The oil available near the top portion of the RDC tower from which non-paraffinic hydrocarbons have been extracted in the RDC tower is termed as "Raffinate". This Raffinate also contains about 10-30% of Furfural. This Furfural is separated under a vacuum of 66 cm of Hg at a temperature of 205°C. The Raffinate (Lube oil) is the product from which non-paraffinic hydrocarbons have been extracted and its viscosity index (VI) is raised.

Methyl Ethyl Ketone (MEK) De-Waxing Process:

The de-waxing process is employed to remove the waxes from the raffinate oil by dissolving the raffinate in a solvent mixture containing Methyl Ethyl Ketone (55%) and Toluene (45%). The mixture of oil and waxes is then cooled to crystallize the waxes. The wax is then separated from the oil in the rotary filter.

The wax and the filtrate oil are processed further in separate system in which the solvent is recovered by evaporation and steam stripping.

Hydro Finishing Process:

In this final processing stage, the lube base oils are stabilized and their colour is further improved by hydrogenation reaction in the presence of a catalyst.

The hydro finished lube oils are dispatched to refinery storage tanks for distribution to Oil Marketing and Lube Oil Blending Companies.

Oil Movement And Shipping:

Huge quantity and variety of crude oils i.e about 3 million tons per annum and about equal tonnage distributed in about thirty products are handled at NRL. For this, elaborate system of pumping stations, pipelines, tankage and loading gantries are maintained. The inventory of crude oil and products stored at refinery tankage has enormous monetary value. This operation involves receipt and transfer of crude oil from port terminal, inland domestic crude oil receipts, transfer to and receipts from processing units, product transfer to Oil Marketing Companies and product shipment through tank lorry filling gantries.

About 150 Nos. crude oil and product storage tanks are utilized for this purpose. Shipping, Marketing & Sales Departments work side-by-side with Oil Movement to facilitate documentation's and coordination with Excise Authorities.

Asphalt Production:

The residual effluents from the two Propane De-Asphalting Units and Furfural Extraction Units are blended here for the production of paving grade asphalts. At asphalt filling unit it is filled in drums or filled in tank lorries for Marketing.

Keamari Terminal:

NRL maintains a port terminal installations located at Keamari Oil peers about 18 Km from the Refinery premises. The Keamari Terminal is connected with the main Refinery through Korangi-Keamari pipelines. Very large Crude Oil storage tanks at Keamari Terminal receive imported Crude from the oil tankers, which is then transferred to the Refinery through pipeline. Huge tankage is available for export of Naphtha, which is also handled at Keamari Terminal. Fuel products from the Refinery are pumped via Keamari Terminal manifolds to Oil Marketing Companies, located adjoining to Keamari Terminal.

Keamari Terminal has the facility to receive the products, to store into the tanks and to distribute the products to OMCs (Oil Marketing Companies).

Korangi-Keamari Pipeline:

Finished oil products are stored separately in premises at Korangi. The Lube base oil, Asphalt, and BTX are transported by road either in drums or in tankers. Fuel products are dispatched through Korangi-Keamari (KK) pipeline to Keamari Terminal and finally to OMCs (Oil Marketing Companies). Similarly imported crude oil received at Keamari terminal is pumped to crude storage tanks at Korangi site.

Utilities At Refineries:

The major utilities required for the operation of refineries are fuel oil / Natural gas, water, steam, and electricity. The steam is used for the following purposes:

- To operate the turbine driven pumps and compressors.
- As process steam.
- As atomizing steam for oil fired burners of furnaces
- For heating purposes.
- To pull vacuum by steam ejectors.

Water before feeding into boiler is treated at water treatment units to remove salts like calcium sulphate, calcium nitrates, magnesium-sulphate, and magnesium nitrates. Ion-exchange method is used to remove these salts.

The cooling water is used for the following purpose:

- Cooling the products.
- Condensing the vapors.
- Cooling of the equipments.

Cooling water cycle is a closed circuit system in which hot water from different sections of plant is collected, cooled in cooling tower in which heat is transferred from the water to the air by direct contact and again utilized with the addition of make up water.

Reverse Osmosis Plant:

The shortfall in water supply from Karachi Water & Sewerage Board has been partially managed by installation of 100,000 and 200,000 300,000 Gallons per day three R.O Plants. It is designed on underground brackish water source for which wells have been made to supply raw water.

🖄 NATIONAL REFINERY LIMITED

Power Generation:

Self-Power Generation plant has a 7.5 MW steam turbogenerator and a 4.0 MW Diesel-Fuel Oil Engine Power Generator.

The self-power generation is meant for continuous uninterrupted power supply and to avoid plant shutdown and production loss due to power breakdown.

Quality Control And R & D:

Each and every product leaving the refinery has to conform to stringent international specifications. In order to achieve this fine degree of control, extensive monitoring of crude oils, feed stocks, intermediates, finished products and utilities is carried out with the aid of modern sophisticated instruments.

The role of the laboratory is, however, not limited to this activity alone. Research and Development work is carried out to give a basis for innovations in processes and products.

NRL strives to satisfy the customer by providing best value products within specifications. Close monitoring of refinery operations is coupled with testing of samples of intermediates and finished products on round the clock basis. Strict quality controls are ensured through testing and certification of each petroleum product before pumping to marketing companies.

Safety And Fire Fighting:

Crude oil and petroleum products are highly inflammable and dangerous materials. Therefore adequate precautionary and preventive measures are mandatory for safe operation. Safety and Fire Fighting personnel are responsible to ensure implementation of safety procedures developed to maintain safe conditions at plant during operation and maintenance to avoid accidents. A fully equipped and well trained Fire fighting contingent is available round the clock with fleet of fire fighting trucks and adequate inventory of foam to handle emergencies.

Maintenance And Workshop:

Petroleum refining involves high temperature and highpressure technologies utilizing high-pressure reactors, vessels, towers, heat exchangers, furnaces, pipelines, pumps and compressors along with sophisticated instrumentation and electrical installations.

Reliability of Refinery equipments running round the clock basis is ensured through regular monitoring, preventive maintenance and repairs by the Maintenance Departments. Operational history of each equipment is maintained for diagnosis and to plan the future needs. Complete shutdowns of units are planned for preventive maintenance and replacements to avoid breakdowns and forced shutdowns.

SUSTAINABILITY REPORT 2015

The Workshop, a vital unit of Maintenance department provides support to the production by undertaking necessary repair in case of contingencies. The Workshop possesses sophisticated machinery for undertaking repair work and fabrication of parts to ensure continuous refinery operation.

Ware House:

National Refinery Limited maintains a large Warehouse for storing mechanical spares and supplies for the maintenance of refinery equipment. Warehouse is also responsible for storing and supply of chemicals used in refinery processes. A large number of different parts and supplies of high value are stored and maintained in NRL Warehouse. An elaborated re-ordering system is followed so that quality product supply is ensured at all points in time.

Fuel Gas:

Refinery fuel gas demand is met by supply of natural gas from the Sui Southern Gas Company.

Flare System:

The Fuels refinery, Lube I refinery and Lube II refinery each have their own dedicated flare and elevated flare header systems with knock out drums. All the process controlled and emergency pressure relief is routed to these flares through flare headers.

Drainage & Waste Treatment:

Process areas are paved and sloped with drainage channels in and around the process plants. The LPG bullets storage area is also paved and sloped. Liquid effluent from the refinery plants is routed to the waste treatment plant on site.

GRI : G3 CONTENT INDEX

S.No	Sustainability Reporting Indicator's					
1.	Strategy and Analysis					
1.1	Statement from the most senior decision-maker of the organization (e.g. CEO, chair, or equivalent					
1.2	Description of key impacts, risks, and opportunities					
2.	Organizational Profile					
2.1	Name of the organization					
2.2	Primary brands, products, and / or services					
2.3	Operational structure of the organization					
2.4	Location of organization's headquarters					
2.5	Number of countries where the organization operates					
2.6	Name of ownership and legal form					
2.7	Markets served (including sectors served, and types of customers / beneficiaries)					
2.8	Scale of the reporting organization, including;					
	 Number of employees, Number of operations 					
	 Net sales Total capitalization broken down in terms of debt and equity and 					
	Quantity of products or services provided					
2.9	Significant changes during the reporting period regarding size, structure, or ownership					
2.10	Awards received in the reporting period					
3.	Report Parameters					
3.1	Reporting period (e.g. fiscal / calendar year)					
3.2	Date of most recent previous report					
3.3	Reporting cycle (annual, biennial, etc)					
3.4	Contact point for questions regarding the report					
3.5	Process for defining report content, including					
	Determining materiality					
	Prioritizing topics					
3.6	Boundary of the report (e.g. countries, divisions, subsidiaries, leased facilities, joint ventures, suppliers)					
3.7	State any specific limitations on the scope or boundary of the report					
3.8	Basis for reporting on joint ventures, subsidiaries, leased facilities, outsourced operations, and other entities					
	that can significantly affect comparability from period to period and / or between organizations					
3.9	Data measurement techniques					
3.10	Explanation of the effect of any re-statements of information provided					
3.11	Significant changes from previous reporting periods					
3.12	Table identifying the location of the Standard Disclosures in the report					
3.13	Policy and current practice with regard to seeking external assurance for the report, explain the relationship					
	between the reporting organization and the assurance provider(s)					
4.	Governance, Commitments and Engagement					
4.1	Governance structure of the organization, including committees under the highest governance body					
	responsible for specific tasks, such as setting strategy or organizational oversight					

S.No	Sustainability Reporting Indicator's				
4.2	Indicate whether the Chair of the highest governance body is also an executive officer				
4.3	For organizations that have a unitary board structure, state the number and gender of members of the				
	highest governance body that are independent and/or non-executive members.				
4.4	Mechanisms for shareholders and employees to provide recommendations or direction to the hig				
	governance body.				
4.5	Linkage between compensation for members of the highest governance body, senior managers, and				
	executives and the organisation's performance.				
4.6	Processes in place for the highest governance body to ensure conflicts of interest are avoided.				
4.7	Process for determining the qualifications & expertise of the members of the highest governance body for				
	guiding the organisation's strategy on economic, environmental, and social topics.				
4.8	Internally developed statements of mission or values, codes of conduct, and principles relevant to economic,				
	environmental, and social performance and the status of their implementation.				
4.9	Procedures of the highest governance body for overseeing the organisation's identification and management				
110	of economic, environmental, and social performance, including relevant risks and opportunities, and				
	adherence or compliance with internationally agreed standards, codes of conduct, and principles.				
4.10	Processes for evaluating the highest governance body's own performance, particularly with respect to				
1.10	economic, environmental, and social performance.				
4.11	Explanation of whether and how the precautionary approach or principle is addressed by the organisation.				
4.12	Externally developed economic, environmental, and social charters, principles, or other initiatives to which				
7.12	Externally developed economic, environmental, and social charters, principles, or other initiatives to which the organisation subscribes or endorses.				
4.13	Memberships in associations (such as industry associations) and/or national / international advocacy				
4.10	organisations				
4.14	List of stakeholder groups engaged by the organisation.				
4.15	Basis for identification and selection of stakeholders with whom to engage.				
4.16	Approaches to stakeholder engagement, including frequency of engagement by type and by stakeholder				
1.10	group.				
4.17	Key topics and concerns that have been raised through stakeholder engagement, and how the organisation				
	has responded to those key topics and concerns, including through its reporting.				
5.	Management Approach and Performance Indicators				
01	Economic				
5.1	The economic dimension of sustainability concerns the organization's impacts on the economic conditions				
011	of its stakeholders and economic systems at local, national and global levels				
5.2	Organization-wide goals regarding performance relevant to the Economic Aspects				
5.3	Brief, organization-wide policy (or policies) that defines the organization's overall commitment relating to the				
0.0	Economic Aspects listed above, or state where this can be found in the public domain				
	Economic Performance				
5.4.1	Direct economic value generated and distributed, including revenues, operating costs, employee				
0.7.1	compensation, donations and other community investments, retained earnings, and payments to capital				
	providers and governments.				
5.4.2	Financial implications and other risks and opportunities for the organisation's activities due to climate change.				
5.4.2	Coverage of the organisation's defined benefit plan obligations.				
	Significant financial assistance received from government.				
5.4.4					

S.No	Sustainability Reporting Indicator's Market Presence				
5.4.5	Range of ratios of standard entry level wage by gender compared to local minimum wage at significant				
	locations of operation				
5.4.6	Policy, practices, and proportion of spending on locally based suppliers at significant locations of operation.				
5.4.7	Procedures for local hiring and proportion of senior management hired from the local community at locations				
	of significant operation				
	Indirect Economic Impacts				
5.4.8	Development and impact of infrastructure investments and services provided primarily for public benefit				
	through commercial, in kind, or pro bono engagement.				
5.4.9	Understanding and describing significant indirect economic impacts, including the extent of impacts				
	Environmental				
5.5.1	The environmental dimension of sustainability				
5.5.2	Organization-wide goals regarding performance relevant to the Environment Aspects				
5.5.3	Brief, organization-wide policy (or policies) that defines the organization's overall commitment related to the				
	Environmental Aspects				
5.5.4	Procedures related to training and raising awareness in relation to the Environmental Aspects				
5.5.5	Procedures related to monitoring and corrective and preventive actions				
	Materials				
5.5.5	Materials used by weight or volume.				
5.5.6	Percentage of materials used that are recycled input materials.				
	Energy				
5.5.7	Direct energy consumption by primary energy source.				
5.5.8	Indirect energy consumption by primary source.				
5.5.9	Energy saved due to conservation and efficiency improvements.				
5.5.10	Initiatives to provide energy-efficient or renewable energy based products and services, and reductions in				
	energy requirements as a result of these initiatives.				
5.5.11	Initiatives to reduce indirect energy consumption and reductions achieved.				
	Water				
5.5.12	Total water withdrawal by source.				
5.5.13	Water sources significantly affected by withdrawal of water.				
5.5.14	Percentage and total volume of water recycled and reused.				
	Biodiversity				
5.5.15	Location and size of land owned, leased, managed in, or adjacent to, protected areas and areas of high				
	biodiversity value outside protected areas.				
5.5.16	Description of significant impacts of activities, products, and services on biodiversity in protected areas and				
	areas of high biodiversity value outside protected areas.				
5.5.17	Habitats protected or restored.				
5.5.18	Strategies, current actions, and future plans for managing impacts on biodiversity.				
5.5.19	Number of IUCN Red List species and national conservation list species with habitats in areas affected by				
	operations, by level of extinction risk.				
	Emissions, Effluents, and Waste				
5.5.20	Total direct and indirect greenhouse gas emissions by weight.				

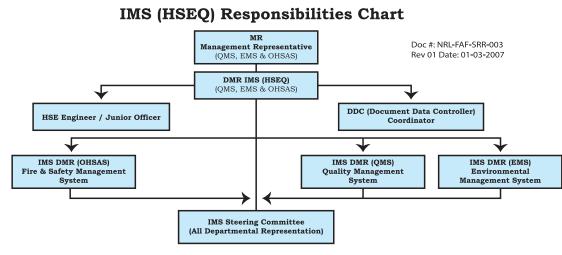

S.No	Sustainability Reporting Indicator's			
5.5.21	Other relevant indirect greenhouse gas emissions by weight.			
5.5.21	Initiatives to reduce greenhouse gas emissions and reductions achieved.			
5.5.22	Emissions of ozone-depleting substances by weight.			
5.5.23	NOx, SOx, and other significant air emissions by type and weight.			
5.5.24	Total water discharge by quality and destination.			
	NOx, SOx, and other significant air emissions by type			
5.5.25	Total water discharge by quality and destination.			
5.5.26	Total weight of waste by type and disposal method.			
5.5.27	Total number and volume of significant spills.			
5.5.28	Weight of transported, imported, exported, or treated waste deemed hazardous under the terms of the Basel			
	Convention and percentage of transported waste shipped internationally.			
5.5.29	Identity, size, protected status, and biodiversity value of water bodies and related habitats significantly			
	affected by the reporting organization's discharges of water and runoff.			
	Products and Services			
5.5.30	Initiatives to mitigate environmental impacts of products and services, and extent of impact mitigation.			
5.5.31	Percentage of products sold and their packaging materials that are reclaimed by category.			
	Compliance			
5.5.32	Monetary value of significant fines and total number of non-monetary sanctions for noncompliance with			
	environmental laws and regulations.			
	Transport			
5.5.33	Significant environmental impacts of transporting products and other goods and materials used for the			
	organization's operations, and transporting members of the workforce.			
	Overall			
5.5.34	Total environmental protection expenditures and investments by type.			
	Labor Practices and Decent Work			
5.6.1	Organization-wide goals regarding performance relevant to the labor Aspects, indicating their linkage to the			
	internationally recognized universal standards			
5.6.2	Brief, organization-wide policy that defines the organization's overall commitment related to the labor aspects			
5.6.3	Procedures related to training and raising awareness in relation to the Labor Aspects.			
5.6.4	Procedures related to monitoring and corrective and preventive actions. List of certifications for labor			
	performance or certification systems			
	Employment			
5.6.5	Total workforce by employment type, employment contract, and region, broken down by gender.			
5.6.6	Total number and rate of new employee hires and employee turnover by age group, gender, and region.			
5.6.7	Benefits provided to full-time employees that are not provided to temporary or part-time employees, by			
	significant locations of operation.			
5.6.8	Return to work and retention rates after parental leave, by gender.			
	Labor / Management Relations			
5.6.9	Percentage of employees covered by collective bargaining agreements.			
5.610				
	agreements.			

S.No	Sustainability Reporting Indicator's			
	Occupational Health and Safety			
5.6.11	Percentage of total workforce represented in formal joint management worker health and safety committees			
	that help monitor and advise on occupational health and safety programs.			
5.6.12	Rates of injury, occupational diseases, lost days, and absenteeism, and number of work related fatalities by			
	region and by gender.			
5.6.13	Education, training, counseling, prevention, and risk-control programs in place to assist workforce members,			
	their families, or community members regarding serious diseases.			
5.6.14	Health and safety topics covered in formal agreements with trade unions.			
	Training And Education			
5.6.15	Average hours of training per year per employee by gender, and by employee category.			
5.6.16	Programs for skills management and lifelong learning that support the continued employability of employees			
	and assist them in managing career endings.			
5.6.17	Percentage of employees receiving regular performance and career development reviews, by gender.			
	Diversity and Equal Opportunity			
5.6.18	Composition of governance bodies and breakdown of employees per employee category according to			
	gender, age group, minority group membership, and other indicators of diversity.			
	Equal Remuneration for Women and Men			
5.6.19	Ratio of basic salary and remuneration of women to men by employee category, by significant locations of operation.			
	Human Rights			
5.7.1	Organization-wide goals regarding performance relevant to the human rights Aspects			
5.7.2	Brief, organization-wide policy (or policies) that defines the organization's overall commitment to the human			
	rights Aspects			
5.7.3	Describe risk assessment procedures that include human rights, including the use of industry guidance and			
	practices			
5.7.4	Processes and procedures for assessing, reviewing or tracking human rights impacts at the level of individual			
	operations			
5.7.5	Procedures related to training and raising awareness in relation to the human right Aspects			
5.7.6	Procedures related to monitoring and corrective and preventive actions, including those related to the supply			
	chain.			
	Investment and Procurement Practices			
5.7.7	Percentage and total number of significant investment agreements and contracts that include clauses			
	incorporating human rights concerns, or that have undergone human rights screening.			
5.7.8	Percentage of significant suppliers and contractors that have undergone screening on human rights and			
	actions taken.			
5.7.9	Total hours of employee training on policies and procedures concerning aspects of human rights that are			
	relevant to operations, including the percentage of employees trained.			
	Non-Discrimination			
5.7.10	Total number of incidents of discrimination and corrective actions taken.			
	Freedom of Association and collective Bargaining			
5.7.11	Operations and significant suppliers identified in which the right to exercise freedom of association			
	and collective bargaining may be violated or at significant risk, and actions taken to support these			
	rights.			

S.No	Sustainability Reporting Indicator's					
	Child Labor					
5.7.12	Operations and significant suppliers identified as having significant risk for incidents of child labor, and					
	measures taken to contribute to the effective abolition of child labor.					
	Forced and Compulsory Labor					
5.7.13	Operations and significant suppliers identified as having significant risk for incidents of forced or					
	compulsory labor					
	Security Practices					
5.7.14	Percentage of security personnel trained in the organization's policies or procedures concerning aspects of					
	human rights that are relevant to operations.					
	Indigenous Rights					
5.7.15	Total number of incidents of violations involving rights of indigenous people and actions taken.					
	Assessment					
5.7.16	Percentage and total number of operations that have been subject to human rights reviews and/or impact					
	assessments.					
	Remediation					
5.7.17	Number of grievances related to human rights filed, addressed and resolved through formal grievance					
	mechanisms.					
	Society					
5.8.1	Organization-wide goals regarding performance relevant to the Society Aspects					
5.8.2	Brief, organization-wide policy (or policies) that defines the organization's overall commitment related to the					
	society aspects, or state where this can be found in the public domain					
5.8.3	Procedures related to training and raising awareness in relation to the Society Aspects					
5.8.4	Procedures related to monitoring and corrective and preventive actions. List of certifications for performance					
	or certification systems					
	Local Communities					
5.8.5	Percentage of operations with implemented local community engagement, impact assessments, and					
	development programs.					
5.8.6	Operations with significant potential or actual negative impacts on local communities.					
5.8.7	Prevention and mitigation measures implemented in operations with significant potential or actual negative					
	impacts on local communities.					
	Corruption					
5.8.8	Percentage and total number of business units analyzed for risks related to corruption.					
5.8.9	Percentage of employees trained in organization's anti-corruption policies and procedures.					
5.8.10	Actions taken in response to incidents of corruption.					
	Public Policy					
	Public policy positions and participation in public policy development and lobbying.					
5.8.12	Total value of financial and in-kind contributions to political parties, politicians, and related institutions					
	by country.					
F 0 10	Anti-Competitive Behavior					
5.8.13	Total number of legal actions for anticompetitive behavior, anti-trust, and monopoly practices and					
	their outcomes.					

S.No	Sustainability Reporting Indicator's				
	Compliance				
5.8.14	Monetary value of significant fines and total number of non-monetary sanctions for non-compliance with				
	laws and regulations.				
	Product Responsibility				
5.9.1	Organization-wide goals regarding performance relevant to the Product Responsibility Aspects				
5.9.2	Brief, organization-wide policy (or policies) that defines the organization's overall commitment related to the				
	society aspects				
5.9.3	Procedures related to training and raising awareness in relation to the Product Responsibility Aspects				
5.9.4	Procedures related to monitoring and corrective and preventive actions, including those related to the				
	supply chain.				
	Customer Health and Safety				
5.9.5	Life cycle stages in which health and safety impacts of products and services are assessed for improvement,				
	and percentage of significant products and services categories subject to such procedures				
5.9.6	Total number of incidents of non-compliance with regulations and voluntary codes concerning health and				
	safety impacts of products and services during their life cycle, by type of outcomes				
	Product and Service Labeling				
5.9.7	Type of product and service information required by procedures, and percentage of significant products and				
	services subject to such information requirements.				
5.9.8	Total number of incidents of non-compliance with regulations and voluntary codes concerning product and				
	service information and labeling, by type of outcomes.				
5.9.9	Practices related to customer satisfaction, including results of surveys measuring customer satisfaction.				
	Marketing Communication				
5.9.10	Programs for adherence to laws, standards, and voluntary codes related to marketing communications,				
	including advertising, promotion, and sponsorship.				
5.9.11	Total number of incidents of non-compliance with regulations and voluntary codes concerning marketing				
	communications, including advertising, promotion, and sponsorship by type of outcomes.				
	Customer Privacy				
5.9.12	Total number of substantiated complaints regarding breaches of customer privacy and losses of				
	customer data.				
	Compliance				
5.9.13	Monetary value of significant fines for noncompliance with laws and regulations concerning the provision and				
	use of products and services.

Risk Control - Management Systems

The refinery management system, procedures and documentation is well-managed and has received ISO-9001, ISO-14001 and OHSAS 18001 accreditation. Re-certification by TUV took place in April 2015.

Training

The Operator training program is well established. The training programme includes training in standard operating procedures, emergency operating procedures and skills based training. New Operators with a Technical Diploma receive 4 months classroom and 18 months on the job training, with formal assessment every 3 months. The classroom training is conducted in the dedicated Human Resource Development Centre (HRDC). School leavers have a 3-year Apprentice training programme, which includes an additional 12 months on the job training.

Graduate Production Engineers undergo a 2-year training programme. It includes training on Standard Operating Procedures and technical training by HRDC experts. In addition, Engineers are sent abroad for specific technical training as required.

There is on-going HSE and technical training programme for all.

Permit to Work System

All maintenance and project work on the process plants are controlled through the Permit to Work system. The Maintenance or contract staff planning the work must prepare a job method. There is a lock out/tag out system for electrical and mechanical isolations. For electrical isolation this requires a lock and tag on the switchgear in the sub station. Entry to electrical rooms is only by authorised personnel i.e. Electrical Technicians and Supervisors. For process and pipe isolations, double isolation including blinds at pipe ends is required. Valves are locked closed and tagged with relevant information.

The work permit includes work risk assessment, precautions and formal handover sections for Maintenance/ contractors and Operations. A copy of the completed work permit is retained by Operations. In addition to Cold Work and Hot Work there are permits for excavation, confined space entry, crane operations, radiography, scaffolding and vehicle entry in restricted process areas. The permit to work system also controls any work activity around the pipeline corridor from the refinery to the terminal.

Each permit is valid for one shift and all jobs in the field are overseen by Field Operators. For critical hot work, fire watch is provided at the work site and portable continuous gas detectors are placed near the work area. Atmospheric flammable gas readings are also taken and recorded.

All active maintenance jobs on the plants are entered in the relevant plant control room logbook, and a separate register is maintained containing instructions regarding the on-going work.

Safety officers also make daily safety walk about with Operational staff and carry out audits of all work permits using a detailed checklist.

Control of Ignition Sources

Smoking or use of mobile phones is not allowed in the process and storage areas. Matches and lighters must be left at the site entrance gate, and there are designated smoking shelters on site. Use of electrical equipment by contractors is strictly controlled. The equipment has to go through an authorisation procedure, requiring assessment of the equipment according to the relevant area electrical classification. Vehicle access to restricted process areas requires a vehicle entry permit. All staff or contractor vehicles which have to be used in the process or storage areas must be fitted with flame arrestors.

Emergency Shutdown (ESD) System By-Pass

If an ESD has to be bypassed, there is a form which must be completed and authorised by Area Operations and Maintenance management, and retained in a file in the local control room. A Hazard Analysis is required for any ESD bypass needed for longer than a shift. The forms retained in the local control room were reviewed and it was confirmed that all ESD bypasses were properly authorised and completed within a shift.

Bypass of other critical equipment, for example essential for fire response is strictly controlled through appropriate authorisations and every activity is logged.

Operating Procedures

Manuals of controlled process operating procedures are kept in the control rooms.

The refinery is IMS (HSEQ) certified, and as part of certification the procedures are reviewed annually. A copy of emergency procedures is also kept in each control room.

Handover / Shift change

Because the instrumentation in the control rooms is panel-mounted digital and analogue controllers, the Panel Operators complete detailed log sheets with critical process data several times per shift. The Field Operators have a checklist which they complete every four hours, logging critical plant data. The Shift Foremen have a logbook in which they record all important plant issues. The Panel Operator log sheet, Field Operator checklist and Foreman logbook are all handed over formally at each shift change.

Likewise, in the Oil Movements area, manual level readings for all tanks are recorded every four hours on a log sheet and handed over to the next shift.

House Keeping

Housekeeping in the plants, storage areas and buildings visited during the survey was found to be to a very good standard. Safety labels are displayed and equipment and pipe labels applied. Pipe trenches were clear of grass. Paintwork and fireproofing was generally in good condition. Pipework drain plugs and blinds were also in place.

Maintenance

The Maintenance Division / Section has three departments as follows –

- i) Maintenance I responsible for the maintenance and repair of process area equipment.
- ii) Maintenance II responsible for the maintenance and repair of Electrical / Instrument system for the entire refinery.
- iii) Maintenance III responsible for the maintenance and repair of the Boilers, Utilities equipment, Tank farm, Korangi to Keamari pipelines and Keamari Terminal.

The maintenance philosophy is largely preventive and is scheduled using the SAP Planned Maintenance module. Corrective Maintenance Work Orders are raise in a Job Order book by Operations and are then entered into the SAP Corrective Maintenance module by the Maintenance Planners.

Rotating Equipment

The Maintenance team plans to carry out a full Preventative Maintenance (PM) survey on all critical rotating equipment the completion of PM as a KPI and have a target of 80%, achieving 69% in the 12 months.

The PM survey is done using a checklist generated from SAP which includes checking alignment, greasing, lube oil quality and lube oil levels.

SUSTAINABILITY REPORT 2015

The Inspection Department carries out manual vibration checks more critical pumps and compressors every month. Daily checks are carried out on any machines. The vibration monitoring data is recorded and trended in a spreadsheet database.

The diesel engine and steam turbine are maintained according to the OEM run hour guidelines.

Lube oil quality checks on all rotating machines are carried out quarterly. The oils are tested for gums, water and foam and the oil is changed if the quality is found to have deteriorated.

Fixed Fire Equipment

All fire water/foam monitors are inspected and maintained.

Electrical

The refinery is currently going through a programme of changing oil filled 11KV switchgear and circuit breakers to dry vacuum type equipment. The switchgear is tested every turnaround (TAR) with the trip testing carried out by current injection. Equipment grounding and earthing checks are carried out at least every turnaround or whenever work is done on any equipment. Tanks earthing/ bonding is checked.

The refinery carries out PM checks on pump motors every month including the use of an infrared thermometer to check the temperature of the motor and switchgear in the MCC.

Instruments

All instrument loops and relays are tested every turnaround. Trip loops e.g. for furnaces and levels on distillation columns, are tested once a month, without shutting the isolation valves (XVs). However, the full action of the valves is checked as part of trip tests during the start up procedure following each turnaround. Propane compressors, hydrogen compressors and refrigeration compressors have their own PLCs which allow online testing (Siemens machines). The ESD PLCs are manufactured by Allen Bradley, ABB and Siemens.

All the smoke detectors are tested and repaired as necessary each quarter by a third party contractor.

Spare Parts

The criticality of all spares has been identified from the criticality of the equipment and lead time for delivery of

the part (many parts and materials have to be imported). This information is in SAP so that spares ordering is automated. Critical equipment includes mechanical seals; heater tubes; exchanger bundles; and diesel engine and reformer compressor cylinder rings and liners.

All pump services have a standby spare, and a single pump has the capacity to operate in all services, meaning that plant operation has minimal exposure to pump failure.

Inspection

All equipment inspections are done using API codes, and procedures are documented. All static equipment including pressure vessels and pipes within the refinery and storage terminal are inspected during the turnarounds every three years. On the basis of observations made, major repair or replacement is planned in the next turnaround. In some cases immediate repair or replacement is also carried out if required.

Fixed Static Equipment

All static equipment including pressure vessels and pipes within the refinery and storage terminal are inspected internally during the turnarounds.

External inspection of tanks, including tank wall thickness measurements, is carried out. Paint thickness on all tanks is also checked.

LPG storage vessels are inspected externally, and internally which meets API 510 guidelines.

Furnaces are monitored continuously with skin temperature probes and daily visual checks for flame impingement.

Pressure Safety Valves (PSVs)

All safety relief valves (there are 530 on site) are inspected in every Turnaround and undergo pre-pop test. The prepop test results are kept for reference.

ENGINEERING

Design Standards

International design codes were used for the construction of the different process plants. The standards followed vary depending on the EPC contractor and licensor and include Oil & Gas Authority Pakistan, API, ASME, NFPA, BS, ANSI; and those of Licensors such as UOP,

Snamprogetti and ABB.

The Engineering section uses International standards for the smaller projects developed on site, principally ASME, API, ANSI and TEMA.

Management of Change (MOC)

The refinery uses a formal management of change procedure which has the following steps – Proposal & justification, Risk Review, Technical evaluation, Concept Approval, Detailed Engineering, Funding Approval, Document Control, Job Completion and Plant Change Closure.

Hazard Analysis is covered using a checklist to assist in the identification of risks. A HAZOP will also be carried out if deemed necessary.

The Engineering section has its own drawing office and draughts men, which manages updates to P+IDs and other engineering documentation. The MOC process also required Operating Procedures to be updated and Operators to be trained as required.

Small modifications are handled in-house, but larger projects are handled through Third Party Contract Engineering companies in coordination with the in-house Engineering team.

Document Control

The drawing office uses an AutoCAD system. All existing P+IDs have been converted to CAD format. Modified drawings must be signed off by Operations Engineers as well as functional Engineers, the HSE Manager, the Engineering Manager, the Plant Manager and Operations Management.

HAZOP

The Management of change MOC process includes the requirement for a HAZOP to be done on all plant changes. This is managed by the HAZOP Committee which is chaired by the HSE Manager. The HSE Manager is an experienced HAZOP chairman, a number of Engineers on site to participate in HAZOPs.

EMERGENCY RESPONSE

Organisation

The Refinery and Keamari Terminal each have their own

dedicated full time fire brigades.

The fire teams are part of the HSE Department, with the Superintendents reporting to the HSE Manager. In addition, there are auxiliary Fire Fighters per shift in the refinery from Operations, the Laboratory and Security.

Fire & Safety Training

Full time firemen are trained on-site and by the Civil Defence Authority and National Institute of Fire and Technology.

On site fire training drills are conducted weekly for the fire crews and auxiliaries. The drills include pool fire, pump seal failure fire and breathing apparatus training. HSE Engineers observe the fire drills and record response times. This includes time for the fire tender to reach the location of the fire; laying water / foam hoses; and water on. In addition, there are weekly hose handling drills for the fire crews. The site also has its own fire training ground where live fire training is conducted.

Flood response and evacuation drills are conducted with the exercise observed, and response time for all personnel to evacuate the designated area measured by HSE Engineers.

Emergency Planning

The refinery has an emergency response plan which is controlled by the Health, Safety, Environment and Quality Management System. The plan details the organisation and response to an emergency. It includes major emergencies such as flood, terrorist attack and major fire. The Refinery Shift Controller (RSC) acts as the Emergency Coordinator and will call in a designated list of Managers in case of a major incident. The RSC's office will be used as the incident control room.

As discussed above, the emergency pre-plans are practiced regularly by the fire crews and there are regular site evacuation drills.

Mutual Aid

The refinery has a mutual aid Emergency Response Plan with the Pakistan Refinery Ltd and PARCO oil refineries, and the three local Oil marketing companies at Keamari Terminal. The Terminal has participated in Government organised major oil spill exercises to test the National Marine Disaster Plan. These exercises include the Civil Defence Authority and other companies local to the Terminal.

Safety Organisation

The site has a clear Occupational Health, Safety, Environment and Quality Policy which covers all HSE aspects. In addition, the Refinery achieved OHSAS 18001:2007, ISO 9001:2008 and ISO 14001:2004 certification. External audit and re-certification by TUV Austria took place in April 2015.

The site has three management level committees for the governance of HSE –

- The Management committee which includes all the site General Managers
- The Technical sub-committee which includes Managers from Operations, Maintenance Projects and Engineering
- The Non-technical sub-committee which includes all other non-technical Managers

These committees meet regularly to review audit reports, inspection reports and KPIs and agree actions and resources to address relevant HSE issues.

All the Safety & IMS Officers are experienced engineers and they cover all the process safety aspects, auditing and regular reporting. Process safety KPIs are defined and are formally reported to the management in monthly meetings and to the IMS (HSEQ) Council Meeting every 6 months. In these meetings all the audits / compliance issues are discussed, actions reviewed and actions follow up and completion queried by the management.

NRL had achieved 22.72 million man-hours without a Lost Time Injury as on December 31, 2015. There is a monthly HSE Newsletter where key safety issues are highlighted and achievements publicised.

Safety, health and environment are part of the permanent topics of all the site management key meetings and included in the weekly operations meeting. The Safety Department is involved in refinery and terminal staff and contractor safety training, and maintains all safetytraining records. They also, along with maintenance, check the suitability of contractor equipment, including site area classification requirements and equipment condition.

IMS (HSEQ) Auditing

To maintain the site ISO 9001:2008 (Quality Management System), ISO 14001:2004 (Environmental Management System) and OSHAS 18001:2007 (Occupational Safety & Health Management System) accreditations, there are internal and external audits carried out every year. In addition to this, internal audits of individual department of the Health, Safety, Environment and Quality Management Systems are carried out every year. To achieve this there are a number of trained internal auditors in each refinery Department.

The Civil Defence Local Authority, EPA and Federal Authority also conduct audits once a year.

Incident Investigation

The refinery has a procedure for the investigation of incidents, accidents and near misses, including root cause failure analysis. Incidents are summarised and reported to the HSE committees every year. The refinery also has a system for reporting Near Misses called 'Corrective and Preventive Actions'. Any employee can raise one of these if they observe an unsafe situation and may recommend actions to be taken.

Key Performance Indicators (KPIs)

The plant has a comprehensive set of HSE KPIs. This includes injury statistics, emergency exercise and safety training, environmental testing, incident investigation and reporting, near miss reporting, training, toolbox talks, audits, safety communication and SOP reviews. There are also a number of Process Safety KPIs reported by separate Departments.

Security

The refinery is surrounded by high boundary walls topped with high barbed wire. There are manned watchtowers around the boundary wall. In addition, there are sentry posts around the process area which is regarded as the fall-back area for defence. The administration buildings and main entrance to the refinery are within this walled area. The main entrance comprises a double fixed gate. All vehicles are searched upon entering the refinery. Personnel on foot pass through a metal detector. All matches and lighters must be left at the gate. There are a number of CCTV cameras around the boundary wall and within the refinery.

Similar to the refinery, the terminal is also surrounded by a wall topped by barbed wire with watch towers and CCTV cameras.

Security vehicles patrol the pipeline corridor between the refinery and the terminal. There are two vehicles traveling in opposite directions continuously along this corridor.

The refinery has good relations with the local police and Rangers for support in local stations.

Active Process Protection

All process units have panel mounted analogue and digital control systems. The plants also have PLC-based Emergency Shut Down (ESD) systems which protect the furnaces and major vessels from high or low levels, but there is no full plant make-safe system. The compressors all have local automatic shutdown systems which will trip the machine on high vibrations and high temperatures.

There are regular off-line vibration checks on all pumps using hand-held measuring devices.

Active Fire Protection

There are electric and diesel firewater pumps and jockey pumps, maintaining a main pressure at the Refinery site. They are located in a common, below ground level pump house adjacent to the fire station.

The reservoirs are filled with fresh water supplied by pipeline by the Karachi Water Board.

The fire pump capacity is sufficient to meet the worst case scenario.

At the Keamari Storage Terminal there are electric firewater pumps and diesel pumps taking suction from the fire water reservoir. There is also a diesel pump at the jetty taking from the sea. The pumping capacity has been checked as sufficient to meet the firewater demand in the worst case scenario at the Terminal.

The refinery and terminal firewater system is pressure tested. Fire hydrants are tested and section valves are checked. Firewater pumps are run and tested.

Deluge Systems

All storage tanks at the Refinery and the Keamari Terminal (except some of the heavy lube oil and lube extract tanks)

have water cooling rings at the top and half-way down the tank. The tanks also have fixed and semi-fixed foam pourers onto the floating roof seals and foam injection systems into the roof space. The LPG and four Propane storage bullets have a water deluge system. There are fixed water and foam suppression systems on the API separators; and fixed water suppression systems on each floor in the Admin and Operations Building.

Mobile Systems

At the Refinery there are the fire tenders have an annual third party fitness for service certification.

There is a FP-70 foam concentrate and DCP stock at the refinery in drums and storage tanks. The quality of the foam stock is checked annually.

In addition there are DCP and CO2 stanchion-mounted fire extinguishers located around the site.

Fireproofing

In the process areas, there is concrete fireproofing of structural steel pipe rack and equipment supports.

Most equipment support tables / columns and column skirts are also fire proofed.

All the critical buildings are constructed with concrete and non-combustible materials.

Fire, Gas and Smoke Detection

Smoke detectors are installed in most of the electrical sub stations. Smoke detectors have also been installed in the Lube I, Lube II and Fuels refinery control room rack rooms.

SUSTAINABILITY REPORT 2015

Hazards, Evaluation and Risk Assessment

Frame Work

- OH&S hazards of Normal Operation
- OH&S Turnaround / Shutdown Operation
- Routine activities
- Non Routine activities
- Access to the work place
- Facilities at work place
- Absence of control measures

Hazards Categories

- Ergonomics Hazards
- Mechanical hazards
- Electrical hazards
- Pressure hazards
- Pneumatic hazards
- Falling hazards
- Biological hazards
- Noise hazards
- Vibration hazards
- Toxic hazards
- Radiation hazards
- Explosion hazards
- Chemical hazards
- Fire hazards
- Psychological hazards
- Traffic hazards
- Others

OH&S Hazards Impacts Categories

- Injury / Illness
- Disability / Death
- Production delays and interruption
- Asset Loss
- Property damage
- Tools and equipment damage
- Product and material damage

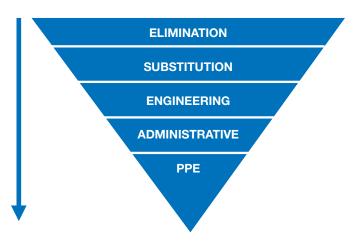

Evaluation of Risks Assessment for identified hazard

- Legislative and regulatory requirements
- Identification of the OH&S Risks face by NRL
- Review OH&S practices, process and procedures
- Evaluation of feed back from the investigation
- Audit results & Recommendations
- Direct inspection and measurement

Risks Control

- Residential hazard identified, even after current control measures, will be assessed for risk and classified under tolerable risks and un-tolerable risks.
- Measure taken with the principal of Eliminate, Substitute, Engineering Control, Administrative Control, Personal Protective Equipment

If risk can not be converted into tolerable risk than PPE's used to reduce the impact

SUSTAINABILITY REPORT 2015

-	/ Operation / Activities rocess / Equipment	Ill Health Injury hazard	Hazard Potential Impact Towards Ill Health / Injury	Current Risk Control
	nteen Food and Burner - eration	Biological Hazard Fire Hazard	 III health Food poisoning Human injury Property loss 	 ✓ Define & implemented SOP's for each activity properly implement along with record management ✓ Emergency Response Plan
		Fire / Flash Hazard	 Property loss III health Minor and Major Human injury Asset loss 	 Define & implemented SOP's for each activity properly implement along with record management. Inspection of breakers and monitor the
off	intenance checking and on / L.T motor breaker, Power bles, electrical equipments	Electrical Hazard	 Injury / Illness Electrocution Skin burn Electrical Shock 	 current on ampere meter. ✓ Area barrication. ✓ Energizing / De-energizing. ✓ Completely check all the internally installed components before switching or starting the motor. ✓ Preventive maintenance schedule. ✓ Emergency Response plan. ✓ Ensure the proper insulation of cables.
		Heat & Temperature Hazard	 Injury / Illness Skin burn 	 ✓ Ensure the proper earthing. ✓ PPE's being used.
	ading / Unloading & stacking of	Falling Hazard (Falling Object from height, Falling object on a moving machine, etc)	 Minor / Major Human injuries. Asset loss. 	 Define & implemented SOP's for each activity properly implement along with record management Load chart to be checked.
fittir	terials, general items, pipes, . ng sheets and spares through rne / Lifter	Traffic Hazard (Movement of Crane / heavy vehicles)	 Minor / Major Human injuries. Asset loss. 	 ✓ Certified crane to be used. ✓ Certified shilling wire to be checked. ✓ Area Marking. ✓ Follow the load chart. ✓ Emergency Response Plan.
		Ergonomic Hazard	 Minor / Major Human injuries. 	✓ PPE's being used.
		Chemical Hazard (Leakage of Gas or Leakage of oxygen diluting gases)	 Minor / Major Human injuries. 	 ✓ Define & implemented SOP's for each activity properly implement along with record management ✓ While receiving the cylinders checking
> Har	ndling of Gas Cylinders	Ergonomic hazard	 Minor / Major Human injuries. 	of valves for any leakage ✓ Training is being given to all concerned
		Fire Hazard	 Minor / Major Human injuries. Asset loss 	 ✓ Emergency Response Plan ✓ Use of PPE's
		Chemical Hazard	 Minor / Major Human injuries. 	 Define & implemented SOP's for each activity properly implement along with record management Designated area
➢ Cat	talyst Regeneration	Health Hazard	Human injuryIII health	for drums ✓ Follow MSDS ✓ Emergency Response Plan ✓ Use of PPE's

			Hazard Potential	
Fac	ility / Operation / Activities / Process / Equipment	III Health Injury hazard	Impact Towards Ill Health / Injury	Current Risk Control
>	Sulfur Determination by X-Ray Sulphur Meter	Radiation hazard (X-Ray)	 III Health Chronic effects 	 Procedure is followed (ASTM # 4294) / equipments manufacturer precaution Define & implemented SOP's for each activity properly implement along with record management Use TLD badges Equipment to be checked before operating for proper covering Emergency Response Plan
>	Maintenance Related Activities during Normal / Turnaround / Shutdown	Mechanical Hazard	➢ Human Injury / Illness.	
:	Furnace Scrapping / Cleaning Refractory Works	Fire Hazard	 Human Injury / Illness. Skin Burn. Asset loss. 	✓ Define & documented (Shutdown /
:	 Column Tray Vessels Tanks Compressor Pumps Welding at Plant Liqua Blaster Operation Sand Blasting Painting 	Ergonomic Hazard	 Human Injury from hitting with heavy object 	Startup / Turnaround) SOP's for each activity properly implement along with record management ✓ Cold work permit ✓ Isolation complete
:		Chemical Hazard	 Human Illness. Acute & Chronic effect on health. 	 Proper Blinding Training for procedure Isolation valve checked. Complete flushing Oxygen test Proper steaming
:	Insulation installation / replacement Valve Hydrocarbon pipeline Welding / cutting / grinding Erection of scaffolding	Noise Hazard	 Hearing loss Human injury / illness. 	 Proper ventilation oxygen test De-energize permit Good house keeping Proper isolation of the place of job Inspection of welding machine Certified welder
:	 Mechanical work at height Electric / Gas welding Heat Exchanger 	Radiation Hazard	 III Health Chronic effects 	 Certified hoses & nipples Skilled manpower Safe handling of insulation debris in bags Proper dust mask / safety goggles
•	Work-Shop machine operation (Radial drill, lathe, milling, shaper, lapping machine) Metalizing (Thermo spray gun operation)	Heat & Temperature Hazard	 Human Injury / Illness. Skin Burn. 	 used. ✓ Proper bath after handling insulation material. ✓ Area barrication ✓ Identification of area ✓ Emergency Response Plan
:	Air Compressor, Welding generator Hydraulic Press Operation Fork Lifter Gasket Fabrication	Electrical Hazard	 Electrocution. Skin Burn. Human Injury. 	✓ Use of PPÉ's
:	Overhead CraneChain blocks pulley testing	Traffic Hazard	 Human Injury. Asset loss. 	

		Hazard Potential		
Facility / Operation / Activities / Process / Equipment	Ill Health Injury hazard	Impact Towards Ill Health / Injury	Current Risk Control	
Repair & Maintenance of Field mounted instruments, Electronic instruments & laboratory analyzer, controllers, transmitters, recorders, alarm systems, pneumatic instruments, instruments & control system	Pressure Hazard Falling Hazard Heat & Temperature Hazard Electrical Hazard Fire Hazard	 Human Injury Asset damage / loss. Minor / Major Human Injury Minor / Major Human Injury Skin Burn Electrocution Skin Burn Human Injury Asset Damage / Ioss. 	 Define & implemented SOP's for each activity properly implement along with record management Proper isolation drain Be vigilant Use of proper insulation Use of proper fittings Use of standard material Use of cold work permit Emergency Response plan Use of PPE's 	
 Start-up, shutdown and running of Turbo Generator and Diesel Generator Air compressor operation and maintenance 	Pressure / Temperature Hazard Noise Hazard Falling / Tripping Hazard Fire Hazard	 Human Injury Minor / Major Human Injury Skin Burn Asset Damage / Ioss. Hearing Ioss. Human Illness. Minor / Major Human Injury Asset Damage / Ioss. 	 Define & implemented (Start up and Shutdown) SOP's for each activity properly implement along with record management Implementation / monitoring for usage of PPE's Routing checking through shift Engineers Display boards Sign boards Emergency Response Plan 	
 LPG sampling from vessel and units Lube Base Oil sampling from tank Light hydrocarbons Solvents (Benzene, Toluene, Xylene) sampling and testing 	Pressure / Temperature Hazard Chemical Hazard Falling / Tripping Hazard	 Human Injury Cold Burning Human Injury / Illness. Asset loss. Impact on Human Illness. Degradation of air quality Minor / Major Human Injury 	 Define & implemented SOP's for each activity properly implement along with record management Procedure of sampling (ASTM) to be followed Before sampling check the valve carefully for rust pitting, leakage Emergency Response Plan Follow MSDS Use PPE's 	
 Noise Level Monitoring. H₂S & Volatile Organic Compounds (VOCs) Monitoring Illumination Monitoring Stack Emission Monitoring 	Chemical Hazard Noise Hazard Ergonomic Hazard	 Human Illness Respiratory problems Hearing loss III Health Human illness Eye sight loss 	 ✓ Define & implemented SOP's for each activity properly implement along with record management ✓ Proper use of PPEs specially earplugs / muff during reading ✓ Effective coordination ✓ Use of sign boards 	
 Rain Water Channel Monitoring Collection of drinking water and effluent water for 3rd Party Testing 	Mechanical Hazard Heat & Temperature Hazard	 Human Injury / Illness. Human Injury / Illness. 	 ✓ Ose of sign boards ✓ Emergency Response Plan 	

Fac	ility / Operation / Activities / Process / Equipment	Ill Health Injury hazard	Hazard Potential Impact Towards Ill Health / Injury	Current Risk Control
*	Filling of Fire Extinguishers	Chemical Hazard	 Human illness Mild irritation to the eyes, skin, respiratory track 	 ✓ Define & implemented SOP's for each activity properly implement along with record management ✓ Follow MSDS ✓ Proper Training
<u>></u>	Carbon dioxide cartridge refilling	Temperature Hazard	 Frost bite Cold burning 	 ✓ Filling instruction ✓ Adequate supervision ✓ Ensure proper ventilation ✓ Emergency Response Plan ✓ Use of PPEs
A	Fire Fighting at Fire Drills /	Fire Hazard	 Human Injury / illness. Skin burn Asset loss 	 ✓ Define & implemented SOP's for each activity properly implement along with record management ✓ Safe escape root ✓ Water should be applied through spray nozzle.
	Process Area	Heat & Temperature Hazard	 Illness Injuries Burning 	 ✓ Use of SCBA against any toxic fumes, vapor & gas. ✓ Proper Communication ✓ Emergency Response Plan ✓ Use of PPE's
A	Biological waste disposable (Drugs antibiotics)	Biological hazard	≻ Human illness	 Define & implemented SOP's for each activity properly implement along with record management Disposal to municipal waste. Biological or contaminated waste for treatment in incineration Training Area Identification Emergency Response Plan
*	Treatment by Injection	Chemical Hazard (Hypersensitivity Reaction)	 Human illness Infection 	 Define & implemented SOP's for each activity properly implement along with record management Used of packed sterilized disposable syringes. Checking of Date of expiry before use. Wearing of gloves Identification of shelves Verification of date by label over the injectable Proper storage of injectable / medicines Emergency Response Plan
*	Under Ground Sewer Network	Chemical Hazard Biological Hazard	 Human illness Infection Headaches Sinus Infection 	 ✓ Define & implemented SOP's for each activity properly implement along with record management ✓ Emergency Response Plan

Facility / Operation / Activities / Process / Equipment	Ill Health Injury hazard	Hazard Potential Impact Towards Ill Health / Injury	Current Risk Control
 Horticulture Management 	Heat & Temperature Hazard	 Human illness (Sunstroke, dehydration, sweating, headache, etc.) 	 Define & implemented SOP's for each activity properly implement along with record management Emergency Response Plan
 ITS management (Computer, Servers, Printers, Plotters, UPS, Scanners, Network bridges, Switches, Towers, Fiber optic cable) 	Electrical Hazard	 Electrocution Human Injury / illness Skin burn 	 Define & implemented SOP's for each activity properly implement along with record management Monitoring, inspection and maintenance of IT related equipments as specified by the manufacturers and suppliers of the IT equipments. Emergency Response Plan

Identification and Traceability

Fire Protection Infrastructure

Environmental Aspect, Impact Risk Assessment

Activity / Area	Aspect	Impact	Control / Mitigation
	Hydrocarbon sludge from tanks and drains channels	 Soil contamination Water contamination 	NRL-SOP-HSE-002 NRL-SOP-HSE-006 NRL-SOP-HSE-007 NRL-SOP-HSE-008 NRL-SOP-HSE-011

IMS (HSEQ) Objectives and **Management Program**

S. #	Department	Description	F.C	L.C	Total (000'0)
			Rupees in `000		000
01	Projects	Additional amount for Reverse Osmosis Plant – IV required for payment of duties and execution of related civil and electric jobs	20,400	-	20,400
02	Quality Control	Procurment of Gas Chromotograph for testing of Benzene, Total Aromatics and Oxygenates in Gasoline and Naphtha (1 no.)	6,426	1,260	7,686
03	Quality Control	Procurement of Water Separability Tester conforming to ASTM D1401 standard (1 no.).	4,182	850	5,032
04	Fuel Refinery	Installation of Demin Water line for Naphtha Hydrobon Unit.	-	35,000	35,000
05	Maintenance – II	Procurement of Digital Insulation Testers 1 KV & 10 KV	714	86	800
06	IT & S	Procurement & installation of high sensivity smoke Detection System. The system will overcome shortfalls of the currently installed conventional detection system.	-	600	600
07	Technical Services	New spill back control valve system si proposed at the discharge of crude feed pump 01 PIC at Two Stage unit	-	800	800
08	Technical Services	Teledyne portable oxygen analyzer for plat former regeneration.	-	1,250	1,250
09	Projects	Replacement of Heat Exchangers of Crude Distillation Unit Fuel Refinery (9 nos.).	-	25,000	25,000
10	Maintenance – II	Overhauling of 4MW Wartsila Diesel Generator at Power Generation intended for execution 2015-16	-	30,000	30,000
11	Technical Services	Procurement of Reverese Osmosis – I Brackish Water Membranes (25nos.). Currently there is nil stock of these in warehouse and are required incase of emergency arises.	-	1,800	1,800
12	Technical Services	Replacement of Draeger Accuro Gas Detector Hand Pump.	-	140	140
13	Oil Movement	Repair / replacement of Korangi-Keamari Pipelines (4 nos.).	-	21,600	21,600
14	Lube – I Refinery	Replacement of Pneumatic Indicator Controllers 16- PIC-02 & 14-PIC-01 (2 nos.).	714	120	834
15	Utilities	Replacement of Vessel 291-V-4C		5,000	5,000
16	Utilities	Replacement of Flame scanners of Boiler – IV.	1,836	136	1,972
17	Engineering	Replacement of 16-F-1 (HK Modified) Reformer Tubes at Lube – I Refinery HGU Unit (3 nos.).	-	5,400	5,400
18	Keamari Terminal	Repair / Renevoation of Crude Oil Storage Tank 55- S-1	-	27,000	27,000

Continual Improvement Through Effective Monitoring

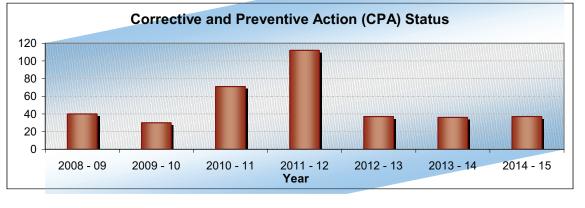

SUSTAINABILITY REPORT 2015

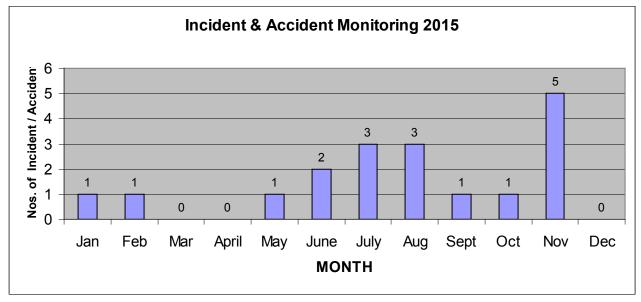

📩 NATIONAL REFINERY LIMITED

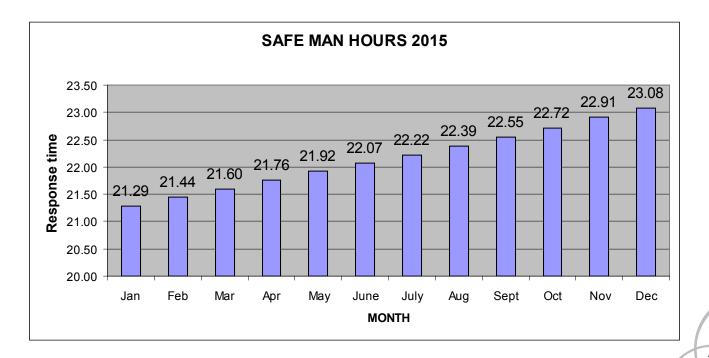

Incident Investigation & Reporting System

The refinery has a procedure for the investigation of incidents, accidents and near misses, including root cause failure analysis. Incidents are summarised and reported to the HSE committees every year. The refinery also has a system for reporting Near Misses identification.

Any employee can raise one of these if they observe an unsafe situation and may recommend actions to be taken.

IMS (HSEQ) Audit

The mechanism for the planning and implementation of Internal Audit for Quality, Environmental, Health and Safety management system against standards and verification of regulatory compliance at NRL.

To maintain the site ISO, EMS and OSHAS accreditations, there are internal and external audits carried out every year. In addition to this, internal audits of individual

department of the Health, Safety, Environment and Quality Management Systems are carried out every year. To achieve this there are a number of trained internal auditors in each refinery Department.

The Civil Defence Local Authority and Federal Authority also conduct audits once a year.

Membership:

National Refinery Limited is member of the following industry association(s) or trade body(ies):

- 1 Oil Companies Advisory Committee (OCAC)
- 2 Petroleum Institute of Pakistan (PIP)
- 3 Lubricants Business Society of Pakistan (LBSP)
- 4 Employers Federation of Pakistan (EFP)
- 5 Karachi Chamber of Commerce and Industries (KCCI)
- 6 Korangi Association of Trade and Industry Karachi (KATI)

SUSTAINABILITY REPORT 2015

Statement of Compliance

STATEMENT OF COMPLIANCE:

TUV Austria Bureau of Inspection and Certification (Pvt.) Limited- Pakistan being an independent assessor carried out a 3rd party assessment of NRL for IMS(HSEQ) Management System requirements compliance. After a thorough Re-certification audit, the auditors of TUV Austria recommended for confirmation for the continuation certification of ISO 14001:2004, OH&SMS 18001:2007 and ISO 9001:2008 standards.

The scope covered during Re-certification audit for NRL includes manufacturing, supply, marketing, sales and export of wide range of petroleum & petrochemical products at Korangi refinery, Korangi-Keamari pipeline and Keamari Terminal.

During the Re-certification audit of NRL a competent team of TUV Austria Bureau of Inspection and Certification (Pvt.) Limited- Pakistan, review the following activity for continual improvement.

- Management commitment for the implementation, continual improvement of IMS (HSEQ) Management System.
- Define and documented reporting requirements of IMS (HSEQ) against the applicable petroleum and petrochemical industry guideline to assure consistency of industry scope.
- Site visits to observe operations and how well IMS (HSEQ) Management requirements effectively
 incorporate in business processes.
- Processes were in place contributing to core safety, health and environmental performance indicators.
- Meeting with relevant departmental staff that manage and perform the activity.
- Comply with the applicable legal and regulatory requirements.
- Stakeholder's engagement process.

This has been verified through re-certification audit conducted in April 2015 that National Refinery Limited has well established, documented, implemented and maintained requirements contained in the Environmental Management System ISO 14001:2004, Occupational Health and Safety Management System OH&SMS 18001:2007 and Quality Management System, ISO 9001:2008 to ensure its adequacy, reliability and accuracy and recommended for continuation. This system is well incorporated in the business processes with a high level of commitment observed during audit process.

TUV Austria Bureau of Inspection and Certification (Pvt.) Limited- Pakistan select the competent auditors based on their qualification, training and experience for National Refinery Limited scope of work. In addition we have gone through Sustainability Report 2015 and found it appropriate to the above IMS (HSEQ) Management system.

TUV Austria Bureau of Inspection and Certification (Pvt.) Limited- Pakistan
